Q.26 Compare loose reed and fast reel motion.

Q.27 Calculate the production /shift of 08 hours of a loom running at rpm 180 P.P.I is 60 and loom efficiency is 80%

Q.28 Draw the different parts of handloom.

Q.29 Define weft fork motion. Explain briefly any one weft fork motion.

Q.30 Discuss different types of heald reversing motion?

Q.31 Explain the working of over pick motion.

Q.32 Explain the cause of shutter flying out and its remedies?

Q.33 Write short note on different types of temple.

Q.34 Explain the different types of sheds of loom.

Q.35 What is the warp protecting motion? Explain any one protecting motion.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

Q.36 Discuss about the working of seven wheel take up motion with suitable diagram.

Q.37 What are different types of weaving Mechanisms? Explain briefly.

Q.38 Draw the flow chart of different types of shedding? Explain in detail the tappet shedding mechanism.

Subject:- Weaving Technology - I

Time : 3Hrs. M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

Q.1 Device used to supply the weft yarns in shuttle looms.

a) Tappet b) Dobby

c) Shuttle d) Sley

Q.2 Motion that release warp from weaver's beam.

a) Picking b) beat up

c) take up d) let off

Q.3 The process of applying a protective coating on the warp yarns to improve the weavability.

a) winding b) warping

c) sizing d) drawing in

Q.4 Last process for yarn preparation before weaving is

a) winding b) warping

c) Drawing in d) Sizing

Q.5 Which device is used for raising and lowering of warp in the loom?

a) temple b) heald

c) cloth beam d) shuttle

Q.6 Device used for the interlacement of the warp & weft yarns.

a) temple b) heald

c) cloth beam d) shuttle

Q.7 It is placed in the shuttle box. It may be formed by leather or other metals.

a) lease rod b) Picker

c) slay d) treadle

Q.8 It is made of wood or metal such as aluminium and used for shedding.

a) temple b) cloth beam

c) heald shaft d) shuttle

Q.9 It is responsible for pushing the last pick of weft to the fell of the cloth by means of the beat up motion.

a) lease rod b) picker

c) reed d) treadle

Q.10 It is the housing for the shuttle and is made of wood.

a) shuttle box b) cloth beam

c) treadle d) lease rod

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

Q.11 Loom is used for________

Q.12 ______ is done with the objective to prepare a warper's beam

Q.13 Breast beam also known as the ______ rest

Q.14 ______ is a shedding device.

Q.15 Loom timing is expressed__________

Q.16 Reed acts as a guide to the _____ which passes from one side of the loom to the other.

Q.17 ______ beam is also known as the weaver's beam.

Q.18 A shuttle normally weighs about _____ kgs.

Q.19 ______ beam is also known as the back rest.

Q.20 ______is dividing of warp sheet in two layers.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

Q.21 Explain the sley eccentricity and its importance.

Q.22 Draw the passage of material through loom.

Q.23 Describe the different types of primary motion.

Q.24 Compare the power loom with hand loom.

Q.25 Describe the features of positive take up motion.
