Q.22 Describe the engine trimming procedure.

Q.23 Demonstrate a thrust reversal system in use.

Q.24 How light aircrafts sound affects human beings?

Q.25 How compressor inspection is done?

Q.26 What can be the problem in exhaust system of engines?

Q.27 What is the operation role of gas turbine engine?

Q.28 Describe construction feature of P & W PIGA engine.

Q.29 How is engine installation done?

Q.30 How is the power assessment is done?

Q.31 What are various lubricants used and where?

Q.32 Explain the need for overhaul and maintenance of engine.

Q.33 Describe Fire Protection system.

Q.34 Write short notes on engine starting.

Q.35 What is the ground running procedure of an engine?

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

Q.36 Explain the fuel and oil system of P&W Piga Series Engine.

Q.37 Describe thrust augmentation systems in detail. Explain the salient features of aircraft fuels.

Q.38 Explain the step by step procedure of inspection of combustion chamber and power assessment procedure.

(20)

No. of Printed Pages : 4 187762/147762

Roll No. ....

6th Sem / AME

Sub : Turbo Propeller and Turbo Jet Engine-II

Time : 3Hrs. M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

Q.1 The pressure inside the lubrication system is controlled by _____.

a) Oil pump b) Oil filter

c) Relief valve d) Supply voltage

Q.2 What is the primary purpose of routine engine maintenance for aircraft?

a) To increase the engine's maximum thrust.

b) To improve fuel efficiency

c) To ensure safe and reliable engine operation

d) To reduce engine noise levels

Q.3 what is the purpose of conducting regular engine oil analysis as part of maintenance procedures?

a) To identify potential fuel leaks

b) To monitor engine performance and detect early signs of engine wear or damage

c) To adjust the aircraft's altitude control

d) To measure engine thrust output

Q.4 Which of the following is a common maintenance task during an engine overhaul?

a) Replacing the cabin lighting

b) Inspecting and refurbishing engine components

c) Adjusting the autopilot system

d) Installing new entertainment systems

Q.5 The continuous inspection program for commercial aircraft in India is approved by which of the following authorities?

a) DGCA b) EASA

c) FAA d) DCGA

Q.6 Inflow ratio is defined as _____

a) Total inflow velocity to tip speed

b) Total lift by rotor to the total drag

c) Drag to lift ratio

d) Propulsive efficiency

Q.7 Where the fuel is stored in the airplanes?

a) Wings only

b) Fuselage only

c) None of the above

d) All of the mentioned

Q.8 Turbo shaft engines are used primarily for _____

a) UAVs

b) Commercial aircrafts

c) Cars

d) Helicoptes

Q.9 Which of the following statements abut jet propulsion is true?

a) Jet engines operate on the principle buoyancy

b) Jet propulsion is only suitable for aircraft

c) Jet engines generate thrust by expelling high-velocity exhaust gases

d) Jet engines relay on external propellers for propulsion

Q.10 Which component of a jet engine is responsible for compressing income air?

a) Turbine b) Combustor

c) Compressor d) Nozzle

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

Q.11 What are various maintenance checks?

Q.12 What is the role of ground power for aircrafts?

Q.13 What is engine rigging?

Q.14 What is the purpose of AB?

Q.15 What do you mean by PIGA?

Q.16 What is the temperature in hot section of an engine?

Q.17 What is engine trimming?

Q.18 What is the impact of power assessment in aircraft?

Q.19 How the engine are attached to big airplanes?

Q.20 Where thrust reversal is used?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

Q.21 What are the controls used during landing?
