Q.25 Explain the term "resultant count" with a basic example.

Q.26 What is moisture regain and why is it significant?

Q.27 Define absolute and relative humidity.

Q.28 Explain the principle of the Shirley trash analyzer.

Q.29 What is fiber maturity and how does it affect dyeing?

Q.30 Describe caustic soda method for testing fiber maturity.

Q.31 Write the working principle of Baer sorter.

Q.32 Explain fiber length and its impact on yarn production.

Q.33 What is fiber fineness and how is it measured?

Q.34 Define twist multiplier and its significance.

Q.35 Describe the direction of twist in yarns.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

Q.36 Explain the process and importance of fixing standards in textile testing.

Q.37 Describe the detail the methods of yarn humbering and conversion between systems.

Q.38 Discuss various moisture-related parameters and their influence on fibre properties.

No. of Printed Pages : 4
Roll No. ....

4th Semester/ Text. Design
Subject : Testing & Quality Control-I

Time : 3 Hrs. M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

Q.1 What is the main purpose of textile testing?

a) Decoration b) Quality control
c) Dyeing d) None of the above

Q.2 Twist multiplier is used to

a) Reduce twist b) Increase dye uptake
c) Determine optimum twist
d) None of the above

Q.3 Sheffield Mirconaire is used to measure

a) Fibre maturity b) Fibre twist
c) Fibre fineness d) None

Q.4 Base sorter is used to measure

a) Fibre length b) Moisture content
c) Twist d) None

Q.5 Caustic soda swelling test determines

a) Fibre length b) Fibre maturity

c) Fibre fineness d) None

Q.6 Shirley analyzer is used for

a) Measuring twist

b) Measuring fiber fineness

c) Trash content in cotton

d) None of the above

Q.7 Moisture regain is expressed as a percentage of

a) Wet weight

b) Dry weight

c) Atmospheric humidity

d) None

Q.8 The indirect yarn numbering system is based on

a) Length per unit weight

b) Weight per unit length

c) Density

d) None of the above

Q.9 Which sampling technique avoids bias?

a) Biased sampling b) Random sampling

c) Arbitrary sampling d) None of the above

Q.10 Fixing standards helps in

a) Reducing market price

b) Enhancing storage

c) Uniform product evaluation

d) None of the above

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (10x1=10)

Q.11 What is the main aim of textile testing?

Q.12 Define biased sampling.

Q.13 Why is sampling needed in textile testing?

Q.14 Which chemical is used in the caustic soda swelling method?

Q.15 Define trash content in cotton fibre.

Q.16 What is a resultant count in yarn numbering?

Q.17 Name one precaution to take during fabric sampling.

Q.18 What is the unit of relative humidity?

Q.19 What is moisture regain?

Q.20 Define absolute humidity?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

Q.21 Define textile testing and state its importance.

Q.22 What is the role of quality control in the textile industry?

Q.23 List any two sampling techniques and explain.

Q.24 Differentiate between direct and indirect yarn numbering systems.
