Q.26 What is jelly, draw a flowchart on the jelly-making process.

Q.27 What is spray drying? Explain with the help of a flow diagram.

Q.28 Write about the principle of hurdle technology as applied in foods.

Q.29 Explain the concept of blanching about food preservation.

Q.30 Explain the working principle of the evaporator and their application.

Q.31 What are additives, write their application in food products.

Q.32 Describe the working of a fluidized bed dryer with a neat diagram.

Q.33 Discuss D, Z and F values.

Q.34 Explain the impact of drying on food products.

Q.35 Explain the term browning reaction.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

Q.36 What are the different low-temperature methods for food preservation? Explain in detail.

Q.37 Elaborate on the concept of fermentation as a traditional method of food preservation.

Q.38 Explain the microbiological biochemical, physical and chemical spoilage of food.

No. of Printed Pages : 4 181133/121133/031133

Roll No. ....

3rd Sem / Food Technology
Sub : Principles of Food Processing & Preservation

Time : 3Hrs. M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

Q.1 What is the salt concentration in brine used in canning vegetables?

a) 10-20% b) 2-3%

c) 6-8% d) 2-26%

Q.2 What is the main aim of pasterurization

a) Inactivate enzymes

b) Reduce moisture content

c) To kill pathogenic microorganisms

d) To kill all types of microorganisms

Q.3 Which ingredient is most important for jelly making?

a) Pectin b) Sugar

c) Salt d) Acetic acid

Q.4 The most common source of food irradiation is/are _______

a) Sunlight

b) UV light

c) Cobalt 60 and cesium 137

d) None of the above

Q.5 Which method involves preserving food in a hermetically sealed container?

a) Canning b)Pickling

c) Freezing d) Vacuum drying

Q.6 What is the safe level of water activity for food storage?

a) 0.85 b) 0.60

c) 0.75 d) 0.65

Q.7 Which is a class II preservative

a) Sugar b) Salt

c) Vinegar d) Sodium benzoate

Q.8 Freezing preserves food by the action of

a) Killing of bacteria

b) Inactivating enzymes

c) Killing virus

d) Stopping the growth of bacteria

Q.9 What is the primary purpose of adding additives to food?

a) Enhance flavour

b) Increase nutritional value

c) Extend shelf life

d) All of the above

Q.10 What is the SI unit of radiation energy

a) Gray b) Rad

c) Radura d) KJ

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

Q.11 TDT stands for _____.

Q.12 The main aim of pasteurization is to kill pathogenic microorganisms (True / False)

Q.13 Pickle is the best example of the application of hurdle technology (True / False)

Q.14 Pulse electric field is a type of irradiation process (True / False)

Q.15 Time and temperature condition for HTST______.

Q.16 Thawing and dehydrofreezing are the same. (True / False)

Q.17 Examples of high acid foods______.

Q.18 Slow-freezing method damages the texture of fruits / vegetables. (True / False)

Q.19 Define F value.

Q.20 TSS for Jelly______.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

Q,21 Explain the role of salt and sugar is food preservation.

Q.22 What is food spoilage, explain different factors affecting food spoilage.

Q.23 Write about different methods used to achieve vacuum in cans during the canning process.

Q.24 Describe various factors affecting the freezing of food.

Q.25 What is the role of radiation with respect to food preservation?
