

- Q.29 Differentiate between minor and major repair with examples.
- Q.30 Write short note on fault tree analysis.
- Q.31 Explain the procedure for maintenance of hydraulic systems.
- Q.32 Differentiate between the functions of EASA and DGCA.
- Q.33 Describe the procedure for maintenance of turn and bank indicator.
- Q.34 Explain engine troubleshooting and rectification.
- Q.35 Describe the working of rate of climb indicator.

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
- Q.36 Describe the procedure for long term and short term storage of engine and accessories.
- Q.37 Classify various structures used in airframe construction and give their relative merits.
- Q.38 Enlist various measuring devices used in communication devices. Explain maintenance procedure of communication devices.

5th Sem / AME Subject:- Aircraft Maintenance Practices

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 The main objective of a maintenance schedule is:
- Increase engine cost
 - Reduce breakdown and downtime
 - Increase maintenance operator workload
 - Reduce maintenance content
- Q.2 In radio equipment, dust accumulation mainly affects:
- Audio clarity
 - Cooling and insulation resistance
 - Antenna gain
 - Signal frequency
- Q.3 Antenna maintenance generally includes:-
- Checking rust and corrosion on tower structure
 - Checking feed line insulation
 - Measuring grounding resistance
 - All of the above

- Q.4 Spark plugs are generally found in: -
 a) Diesel engines b) Petrol engines
 c) Gas turbine engines
 d) Both gas and petrol engines
- Q.5 Hydraulic fluid in aircraft systems is used for:-
 a) Cooling avionics
 b) Generating electricity
 c) Power transmission in landing gear, brakes and flaps
 d) Cabin pressurization
- Q.6 The main objective of airframe maintenance is
 a) To ensure structural integrity and safe operation
 b) To reduce lift force
 c) To increase drag
 d) To decrease aircraft weight
- Q.7 The landing gear system maintenance mainly includes:-
 a) Checking tire pressure and brake system
 b) Polishing aircraft windows
 c) Replacing cabin seats
 d) Refueling operations
- Q.8 Moving iron instruments can measure:-
 a) DC only b) Both AC and DC
 c) AC only d) Voltage
- Q.9 Variable resistors are also called :-
 a) Potentiometers b) Capacitors
 c) Inductors d) Diodes

- Q.10 Dye penetrant inspection is used to detect:-
 a) Surface Cracks b) Internal Cracks
 c) Fuel Cracks d) Noise

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Expand CMM.
 Q.12 The role of FAA is to _____.
 Q.13 What is the purpose of history record sheet?
 Q.14 Define quality circle.
 Q.15 What are stringers?
 Q.16 Six sigma has a target of _____ defect per _____.
 Q.17 Name 2 basic elements of AC systems.
 Q.18 The use of nitrogen in aircraft tyres is to _____.
 Q.19 Bleeding check is used for _____.
 Q.20 Name two AC instruments.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Explain various soldering and crimping techniques.
 Q.22 Write short note on TQM.
 Q.23 Explain various licensing regulations.
 Q.24 Explain various types of aircraft manuals.
 Q.25 Write short note on FMECA.
 Q.26 Explain icing and de-icing system of aircraft.
 Q.27 Give the benefits & example of engine On condition maintenance.
 Q.28 Write short note on ISO 9000.
