

Q.26 Describe the gravimetric method of soil moisture determination.

Q.27 What is the importance of ground water recharge?

Q.28 What are different causes of water logging?

Q.29 How would you reclaim salt affected soils?

Q.30 Describe the mechanics of water erosion.

Q.31 What are different soil separates? Give their classification.

Q.32 What is the use of bunds to control erosion?

Q.33 What are the drainage properties of soil?

Q.34 Give USDA classification of soil texture.

Q.35 What are the methods of water harvesting?

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

Q.36 Give the reasons and factors of formation of Saline, alkaline and acid soils. Briefly describe their harmful effects.

Q.37 What are the principles of erosion control? Explain the mechanical measures to control water erosion.

Q.38 Describe the temporary structures for control of erosion. Explain their types and adaptability.

No. of Printed Pages : 4

Roll No.

3rd Sem / Agri

Subject:- Soil and Water Conservation / Soil Conserv.

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

Q.1 The water that is tightly held on the soil surface and can not move either by gravity or capillary forces.

- a) Capillary water b) Hygroscopic water
c) Gravitational water d) Available water

Q.2 The disposal of excess water to improve agricultural use of land is called

- a) harvesting b) Waterlogging
c) Drainage d) Permeability

Q.3 Wind erosion is very significant in

- a) Clay soil b) Loamy soil
c) Silty soil d) Sandy soil

Q.4 The arrangement of soil particles is

- a) Soil Texture b) Soil structure
c) Soil Separates d) Soil Consistency

Q.5 The collection of rainwater and its recycling for conductive use is

- a) Water logging b) Water storage
c) Water harvesting d) Drainage
- Q.6 The direct action of wind on the soil particles create soil movements known as
a) Saltation b) Suspension
c) Surface creep d) None of these
- Q.7 Rill erosion starts simultaneously with
a) Splash erosion b) Sheet erosion
c) Steam bank erosion d) Gully erosion
- Q.8 If there is a little slope in the field, the soil erosion can be prevented by
a) Contour farming
b) Contour terracing
c) Contour strip cropping
d) All of these
- Q.9 According to ISSS classification, the size of silt should be in between
a) <.002mm b) .02 to .002 mm
c) .01 to .1mm d) .01 to .25 mm
- Q.10 Soil erosion can be reduced by
a) Reducing over grazing
b) Planting proper plants
c) Making dams
d) All of these

(2) 180135/120135/030135

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Define Maximum retentive capacity.
Q.12 Define Coefficient of permeability.
Q.13 SAR stands for _____
Q.14 Define Exchangeable sodium percentage.
Q.15 Define reclamation.
Q.16 Define drainage coefficient.
Q.17 Give Full form of USDA.
Q.18 Define Terracing.
Q.19 What is soil conservation?
Q.20 Give the importance of tillage.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 What are the health hazards due to waterlogged soils?
Q.22 What is the difference between surface and subsurface drainage system?
Q.23 Write a short note on drop spillway.
Q.24 How the soil act as medium of plant growth?
Q.25 Define soil structure and different factors affecting it.
