

- Q.28 What are the advantages of using functions?
 Q.29 What is a lambda function in python?
 Q.30 How is a lambda function in python?
 Q.31 What is the difference between a syntax error and a runtime error in python?
 Q.32 How can you handle multiple exceptions in python?
 Q.33 Which mode is used to open a file for writing in python?
 Q.34 What are class variables in python?
 Q.35 What does the expression [a-z] match in a regular expression?

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain various operators of python.
 Q.37 Write short notes on
 a) Dictionaries in python
 b) Writing Data to a file
 Q.38 What is a function, how to define a function in python, also write advantages of using functions.

No. of Printed Pages : 4
 Roll No.

180853/170853

5th Sem / Comp. Sub : Computer Programming Using Python

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Who is the creator of python?
 a) Guido van Rossum b) Dennis Ritchie
 c) Linus Torvalds d) Larry Wall
 Q.2 What character is used to start a single-line comment in Python?
 a) # b) //
 c) " d) ---
 Q.3 Which function is used to take input from the user in python?
 a) Input() b) Read()
 c) Get_input() d) User-input()
 Q.4 Which data structure in python is immutable?
 a) Lists b) Tuples
 c) Sets d) Dictionaries
 Q.5 What is the scope of a variable defined inside a function in python?
 a) Global scope b) Local scope
 c) Class scope d) Function scope

- Q.6 Which module in python is used for working with dates and times?
- a) sys b) math
 - c) time d) dir
- Q.7 What category of exceptions in python includes syntax errors?
- a) Runtime errors b) Logic errors
 - c) Syntax errors d) Semantic errors
- Q.8 What is the purpose of handling IO exceptions in python?
- a) To ignore errors
 - b) To handle errors related to file input/output operations
 - c) To raise exceptions
 - d) To terminate the program
- Q.9 What is encapsulation in object oriented programming?
- a) Hiding the complexity of the code
 - b) Reusing code
 - c) Grouping related code together
 - d) None of the above
- Q.10 What does the ^ metacharacter represent in regular expressions?
- a) Beginning of a string
 - b) End of a string
 - c) Either the beginning or end of a string
 - d) Any position within a string

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Python is a compiled language. (True/False)
- Q.12 What is the purpose of comments in python?
- Q.13 What is the use of break statement?
- Q.14 Sets in python do not allow duplicate elements. (True/False)
- Q.15 What is purpose of return statement in python functions.
- Q.16 Python's import statement is used to import modules. (True/False)
- Q.17 Name any two exceptions in python.
- Q.18 Name any two access mode used in file handling.
- Q.19 Python classes do not support inheritance. (True/False)
- Q.20 Name of python module for regular expressions.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Write brief History of python.
- Q.22 What are data types of python.
- Q.23 What is % method in python.
- Q.24 Write syntax of the if statement in python?
- Q.25 What is indentation in python.
- Q.26 What is list? How it is accessed.
- Q.27 Write difference between list and tuple.
