

- Q.25 Write the major difference between switch, isolator and circuit breaker.
- Q.26 Mention the various applications of static relay.
- Q.27 Explain the secondary of the current transformer should not be open.
- Q.28 Discuss constructional features of oil circuit breaker.
- Q.29 What are the requirements of a good lightning arrester?
- Q.30 What are the various types of faults that occur in underground lines?
- Q.31 Explain the impedance protection scheme.
- Q.32 Explain in brief the various methods of earthing with neat diagram.
- Q.33 Define Tariff? Discuss its objectives.
- Q.34 What is surge absorber? How do they differ from surge diverter?
- Q.35 Discuss the differential protection of feeders.

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
- Q.36 Describe in detail the Merz Price system of protection for a 3 phase star-Delta transformer.
- Q.37 Draw a neat sketch of an induction type over current relay and describe its operation.
- Q.38 Describe the construction, principal of operation and application of SF6 circuit breaker.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 What percentage of Fault occurring in the power system in single line-to-ground fault. (CO1)
- a) 50% b) 60%
- c) 75% d) 85%
- Q.2 Buchholtz relay is used for protection of
- a) Transmission line b) Alternator
- c) Transformer d) Switchyard
- Q.3 The main function of fuse is to
- a) Open the fault
- b) Prevent excessive current
- c) Protection the over voltage
- d) None of above
- Q.4 The relay used for feeder protection is
- a) Undervoltage relay b) Translay relay
- c) Thermal relay d) Buchholtz relay

(900)

(1)

180963/170963/
120963/030963

- Q.5 The function of Relay is to
- Detect the fault
 - Detect and interrupt the fault
 - Interrupt the circuit
 - All of these
- Q.6 The buchholtz relay are used for the transformer of rating above
- 100 KV
 - 200 KV
 - 500 KV
 - 1000 KV
- Q.7 Domestic consumers are charged according to _____ tariff.
- Flat demand
 - Block rate
 - Flat rate
 - Off peak
- Q.8 Surge absorbers are used for protection against
- High voltage low frequency oscillations
 - Low voltage low frequency oscillations
 - Low voltage high frequency oscillations
 - High voltage high frequency oscillations
- Q.9 Ground wire is used to protect transmission lines against _____
- Heating effects
 - Leakage current
 - Direct lightning strokes
 - All of above

(2) 180963/170963/
120963/030963

- Q.10 Distance relays are Generally
- Impedance type
 - MHO type
 - Reactance type
 - All of above

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 The most commonly used system for the protection of alternator is _____ protection.
- Q.12 The fuse element should have _____ melting point.
- Q.13 Double line fault is a type of _____ fault.
- Q.14 A Buchholz relay operates on the principle of _____.
- Q.15 HRC meant for _____.
- Q.16 A relay is an _____ switch.
- Q.17 The fusing factor is always greater than one. True/False
- Q.18 Voltage is Three phase is _____ Volts.
- Q.19 A lightning arrester is connected between _____ and _____.
- Q.20 Define Earthing.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Give the classification of relay.
- Q.22 Differentiate between symmetrical and unsymmetrical faults.
- Q.23 What do mean by over voltages? Explain its causes.
- Q.24 Explain the working principle of rod gap lightning arrester.
