

- Q.23 Discuss the result of microbial growth in milk.
- Q.24 What are the various causes of food spoilage?
- Q.25 Explain the factors affecting the growth of microorganisms.
- Q.26 How do eggs get contaminated internally?
- Q.27 What are the anti-microbial agents?
- Q.28 Define food spoilage. Enlist various methods to prevent food spoilage.
- Q.29 Discuss about the spoilage of flour.
- Q.30 Explain the spoilage condition of poultry.
- Q.31 What is food poisoning? How it occurs and affects the human body?
- Q.32 What is the mechanism of action of disinfectants?
- Q.33 What is D-Value? How it is important in thermal processing?
- Q.34 Explain all the physical antimicrobial agents.
- Q.35 What are the food borne pathogens?

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain the general type of spoilage in meat in detail.
- Q.37 Discuss about major historical developments in the field of microbiology.
- Q.38 Explain butter spoilage in detail and how it can be control.

No. of Printed Pages : 4

Roll No.

3rd Sem / Food Technology Sub : Food Microbiology

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 The common pathogen in poultry is:
a) Salmonella b) Rhizopus
c) Aspergillus d) Saccharomyces
- Q.2 Pasteurization of milk destroys:
a) All spores
b) Pathogenic bacteria
c) All microorganisms
d) Enzymes only
- Q.3 Sauces are preserved by:
a) Acid and salt b) High pH
c) Low acidity d) High fat
- Q.4 The father of microbiology is :
a) Robert Koch
b) Louis Pasteur
c) Antonie Van Leeuwemhoek
d) Edward Jenner

(4) 181131/121131/031131

(1) 181131/121131/031131

- Q.5 Bread fermentation is carried out by:
- Rhizopus
 - Saccharomyces cerevisiae
 - Aspergillus
 - Penicillium
- Q.6 Green rot in eggs is caused by:
- Lactobacillus
 - Pseudomonas
 - Bacillus
 - Clostridium
- Q.7 The significance of food microbiology is mainly related to:
- Food preservation and safety
 - Food spoilage only
 - Food packaging
 - Marketing
- Q.8 Food infection is caused by:
- Preformed toxins
 - Chemicals
 - Live pathogens ingested with food
 - Enzymes
- Q.9 Chlorine acts as:
- Reducing agent
 - Oxidizing agent
 - Neutral compound
 - Enzymes
- Q.10 Ice-cream contamination mainly occurs due to:
- High sugar
 - Low temperature
 - Homogenization
 - Poor sanitation

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 The main source of contamination in milk is _____.
- Q.12 Spoilage of fish produces a strong _____ odor.
- Q.13 Expand TDT.
- Q.14 Yeast and molds are commonly responsible for spoilage of _____ products.
- Q.15 _____ causes food intoxication.
- Q.16 Z-value indicated the _____ change required to change D-Value by _____ cycle.
- Q.17 Butter has very high water activity. (True/False)
- Q.18 Chemical agents used to destroy microorganisms are called _____.
- Q.19 Bread spoilage known as rope formation is caused by _____.
- Q.20 Name the microorganisms responsible for the contamination of milk.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Define food microbiology. Give the significance of microorganisms in foods.
- Q.22 Explain the microbiology of fruit juices.
