

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x8=16)

- Q.23 Describe in detail the principle, procedure, reference values, and clinical significance of enzymatic methods of urea estimation.
- Q.24 Write a detailed note on serum proteins: introduction, methods of estimation, reference values, and clinical importance.
- Q.25 Describe the estimation of electrolytes (Na^+ , K^+ , Cl^-) along with their normal values and clinical significance.

No. of Printed Pages : 4

Roll No.

1st Year / MLT

Subject : Clinical Biochemistry

Time : 3 Hrs.

M.M. : 60

SECTION-A

Note: Multiple choice questions. All questions are compulsory (6x1=6)

- Q.1 The major site of urea formation in the body is:
- a) Kidney b) Liver
- c) Intestine d) Pancreas
- Q.2 The reference method for urea estimation is:
- a) Jaffe's method
- b) Berthelot reaction
- c) Diacetyl monoxime method
- d) Enzymatic urease method
- Q.3 The end product of creatine metabolism is:
- a) Uric acid b) Creatinine
- c) Ammonia d) Urea

- Q.4 The most abundant plasma protein is:
- a) Albumin b) Globulin
 - c) Fibrinogen d) Hemoglobin

Q.5 Hyponatremia indicates:

- a) High sodium b) Low sodium
- c) High potassium d) Low potassium

Q.6 Hyperuricemia is most commonly associated with:

- a) Diabetes mellitus b) Gout
- c) Hypertension d) Tuberculosis

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (6x1=6)

- Q.7 Urea is formed in the _____ cycle.
- Q.8 The normal reference value of serum creatinine in adults is _____ mg/dL.
- Q.9 The protein responsible for maintaining oncotic pressure is _____.
- Q.10 Potassium plays a vital role in _____ function.
- Q.11 The common method for uric acid estimation is based on the _____ reaction.

(2)

181917

- Q.12 In external quality assurance, laboratories compare their results with _____.

SECTION-C

Note: Short answer type questions. Attempt any eight questions out of ten questions. (8x4=32)

- Q.13 Describe the formation and excretion of urea.
- Q.14 State the principle of the Berthelot method for urea estimation.
- Q.15 Mention two clinical conditions in which blood urea is elevated.
- Q.16 Write the principle of Jaffe's method for creatinine estimation.
- Q.17 Give the reference values for serum creatinine in males and females.
- Q.18 List the functions of serum proteins.
- Q.19 Name two methods for estimation of serum proteins.
- Q.20 Write the normal reference values of sodium and potassium in serum.
- Q.21 Mention two clinical conditions associated with increased uric acid levels.
- Q.22 Differentiate between internal and external quality assurance in biochemistry.
