

- Q.25 Explain any two test conducted on plastic containers.
- Q.26 Explain test to measure dielectric strength of plastics.
- Q.27 Discuss MFI test for plastics.
- Q.28 Describe any one test for film testing.
- Q.29 Discuss refractive Index testing of plastics.
- Q.30 Explain test method for colour measurement of plastics.
- Q.31 Discuss various environmental factors affecting plastic properties.
- Q.32 Discuss arc resistance test and its importance.
- Q.33 Discuss luminous transmittance test.
- Q.34 Explain test specimen preparation and procedure for surface resistivity.
- Q.35 Define K-value of PVC and its importance.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Write short note on :
- Antistatic tests
 - Clarity and haze test
- Q.37 Discuss various test performed on plastic pipes (PVC & HDPE).
- Q.38 Discuss:
- Resistance of plastics of biological systems
 - Immersion test and its importance.

No. of Printed Pages : 4

182251

Roll No.

5th Sem / Plastic Subject:- Plastic Testing - II

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Instrument used for measuring the refractive index of plastics
- Spectrophotometer
 - Multi-meter
 - Refractometer
 - Calorimeter
- Q.2 _____ is a measure of light reflected by the surface of a plastic film.
- Birefringence
 - Gloss
 - Light transmittance
 - None of these
- Q.3 Deformation that occurs due to stress over a period of time is known as _____
- Wear resistance
 - Fatigue
 - Creep
 - None
- Q.4 If we drop a piece of sample in water and it simply floats than it may be _____.
- PE
 - UF
 - Nylon
 - MF

(20)

182251

(1)

182251

- Q.5 ASTM D 256 is the test standard for _____.
a) Tensile testing
b) Dielectric strength Testing
c) Izod testing
d) None of these
- Q.6 _____ is a measure of the susceptibility of the material to surface contamination.
a) Surface resistivity b) Conductivity
c) Induction d) Current
- Q.7 Which of the following is optical property?
a) Haze b) Gloss
c) Refractive index d) All of them
- Q.8 Which of the following test is used for electrical property of plastic?
a) Brittleness temperature
b) Environmental stress cracking resistance
c) Arc resistance
d) Abrasion resistance
- Q.9 ASTM D1434 is the test standard used for:
a) Haze
b) Outdoor Weathering test
c) Water absorption test
d) Gas permeability test

- Q.10 Ratio of viscosity of the solution to that of solvent is known as:
a) Reduced viscosity b) Relative viscosity
c) Inherent viscosity d) Intrinsic viscosity

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Define conditioning parameters.
Q.12 Define Haze.
Q.13 Name two tests conducted on PVC pipes.
Q.14 Name two solvents for ABS.
Q.15 Why antistatic test are conducted on plastics.
Q.16 The ability of an insulator to store electrical energy is indicated by _____.
Q.17 Expand ESCR.
Q.18 MFI stands for _____.
Q.19 Expand ISO.
Q.20 _____ type of hardness is generally used for plastic materials?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Explain Gloss Test.
Q.22 Explain ESCR test in detail.
Q.23 Discuss oxygen index test and its importance.
Q.24 Discuss standards for bio-degradable plastics.
