

- Q.26 Define the term
 a) Hopper b) Barrel
- Q.27 Define the terms:
 a) Injection rate b) Plastication capacity
- Q.28 Write the shut down procedure of injection moulding machine.
- Q.29 How will you vary the wall thickness of product in rotational moulding machine.
- Q.30 Give comparison of blow moulding process and rotational moulding process.
- Q.31 Explain parison swell.
- Q.32 What is curling of parison? Suggest remedies.
- Q.33 State merits of Bi-axially oriented Blow moulding products.
- Q.34 Write four defects in Rotational moulding process and discuss its causes and remedies.
- Q.35 Give advantages of Hydraulic clamping system..

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
- Q.36 Explain different types of blow moulding process with neat sketch.
- Q.37 State any eight defects in Injection moulding and discuss their probable causes and remedies.
- Q.38 Write short note on:
 a) Effect of process variables on end product quality in Rotational moulding
 b) Merits and demerits of rotational moulding process.

5th Sem / Plastic Subject:- Plastic Processing Techniques - III

Time : 3Hrs.

M.M. : 100

SECTION-A

- Note:** Multiple choice questions. All questions are compulsory (10x1=10)
- Q.1 Breaker plate is used in which of following machine.
 a) Injection moulding
 b) Extruder
 c) Rotational moulding
 d) Compression moulding
- Q.2 Shot weight should be.
 a) Less than or equal to shot capacity
 b) More than shot capacity
 c) May be more than or equal to shot capacity
 d) None of above
- Q.3 Most common plastics material used in rotational moulding process is.
 a) PVC b) PP
 c) PE d) PS
- Q.4 For which of following process dies are used.
 a) Injection moulding
 b) Extrusion
 c) Rotational moulding
 d) Compression moulding

(1)

182252

- Q.5 Clamping Pressure is always _____.
a) Higher than injection pressure
b) Lower than injection pressure
c) No relation with injection pressure
d) None of these
- Q.6 _____ is injected into the mould to produce the moulded products.
a) Molten plastic b) Plastics granules
c) Wet Plastic d) Un-Molten Plastics
- Q.7 The defects of partial filling of a mould cavity or cavities are called _____.
a) Flash b) Short shot
c) Shark Skin d) None of these
- Q.8 Parison is the term used in _____.
a) Injection moulding
b) Compression moulding
c) Injection Blow moulding
d) Extrusion Blow moulding
- Q.9 Preform is the term used with which of following process _____.
a) Injection moulding
b) Compression moulding
c) Extrusion Blow moulding
d) Injection Blow moulding
- Q.10 The most commonly used plastics material for making water bottles is _____.
a) PE b) PET
c) PBT d) PVC

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Expand the term ISBN.
Q.12 Define the term Flash.
Q.13 Define the term Short Shot.
Q.14 Define Shrinkage
Q.15 _____ is used to inflate the parison.
Q.16 Name two products made by blow moulding.
Q.17 _____ occur if two merging melt fronts flow parallel to each other and create a bond between them.
Q.18 _____ occurs during the cooling process if certain areas of the part are not cooled sufficiently causing them to contract.
Q.19 Name two products made by rotational moulding.
Q.20 Variation in dimension that may be permitted is called as _____.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Discuss for applications of rotational moulding machine.
Q.22 Discuss various applications of blow moulding machine.
Q.23 Explain merits of injection moulding process.
Q.24 How will you select injection moulding machine for particular application.
Q.25 Why vents are used in moulds. Give the significance of vents.
