

- Q.25 Give limitations of compression moulds.
 Q.26 Explain pot capacity.
 Q.27 Explain die used for making flexible tubes.
 Q.28 Explain various types of die material used in extrusion dies.
 Q.29 Explain die head assembly for blow mould.
 Q.30 Explain neck design for injection blow mould.
 Q.31 Discuss calculations for clamp pressure for compression mould.
 Q.32 Explain heating and temperature control systems for dies.
 Q.33 Discuss principle of transfer moulding.
 Q.34 Explain die land and die swell.
 Q.35 Give difference between feed block and multi manifold die used for co extrusion.

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
 Q.36 Explain various types of mould cooling with the help of neat sketch.
 Q.37 Explain in detail types of mould used for transfer moulding with their advantage and limitation.
 Q.38 Write short note on:
 a) Advantages and disadvantages of compression moulds
 b) Die geometry design of sprue and runners, gate used in plastic processing.

No. of Printed Pages : 4
 Roll No.

182262/122262/032253

6th Sem / Plastic Engineering, Chem Engg. (Spl Polymer Tech)

Sub : Design of Die and Mould-II

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Line formed by joining of two mould halves is known as _____?
 a) Parting Line b) Center Line
 c) Matching Line d) Vertical Line
 Q.2 Which of the following equipment is used for controlling the temperature of molten plastic in the extrusion process?
 a) Thermo resistor b) Thermometer
 c) Thermocouple d) Glass tube
 Q.3 Which material is used for making blow moulds?
 a) Mild steel b) Aluminum
 c) Stainless steel d) High Carbon Steel
 Q.4 Which part is an opening at the entrance of the cavity?
 a) Runner b) Gate
 c) Sprue d) Core

- Q.5 What is the purpose of guide pillars in compression moulding?
- a) to retain shape b) To maintain pressure
c) To improve distance d) To ensure alignment
- Q.6 Which part of the moulding process determines the diameter and wall-thickness of parison?
- a) Molten plastic b) Mould cavity
c) Die gap d) Blow pin
- Q.7 How flash is removed from final product?
- a) Moulding b) Trimming
c) Heating d) Cooling
- Q.8 Which plate is fitted to the mould for fastening a mould platen?
- a) Side plate b) Clamping plate
c) Backing plate d) Guide plate
- Q.9 What size of component is produced in hand compression moulding machine?
- a) Smaller b) Bigger
c) Deeper d) Bigger and Deeper
- Q.10 Which type of mould is called runner less mould?
- a) Compression mould b) Blow mould
c) Cold runner mould d) Hot runner mould

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Flash is removed from the final product by _____ process.
- Q.12 Name two types of dies used for coating units.
- Q.13 Define sprue bush.
- Q.14 Register ring is used to align the mould with machine platen. (True/ False)
- Q.15 A moulding which has a recess or projection is termed as undercut moulding. (True/ False)
- Q.16 Automatic degating with fewer marks is also called a sub surface or submarine gate. (True/ False)
- Q.17 _____ is round cross section and has taper along its length.
- Q.18 _____ type of cooling is usually employed to cool core of long cylindrical products.
- Q.19 A good runner should convey melt with minimum loss of pressure. (True/ False)
- Q.20 Which process is associated with breathing?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Explain multi manifold die for co extrusion films.
- Q.22 Explain selection criteria for compression moulding machine.
- Q.23 Discuss parison programming and control.
- Q.24 Explain positive type compression mould.
