

- Q.26 Explain sandwich foam moulding.
 Q.27 Explain High pressure foam moulding.
 Q.28 Explain the use of insert injection molding process.
 Q.29 Describe plastic-paper laminates.
 Q.30 Discuss blow up ratio and its importance in blown film process.
 Q.31 Write short note on dry spinning process.
 Q.32 Discuss reaction injection moulding.
 Q.33 Explain orientation of fibers and their effect in textile industries.
 Q.34 Discuss Process optimization and its importance.
 Q.35 Discuss advantages of multilayer packaging.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain the extrusion stretch blow principle, uses with a sketch.
 Q.37 Write short note on
 a) Melt spinning process
 b) Wet spinning process.
 Q.38 Explain two colour injection moulding principle, application with suitable diagram.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 ____ is a process, which combine layers of two or more plastics together at a point of extrusion.
 a) Laminating b) Plating
 c) Co-extrusion d) Calendaring
 Q.2 Which of the following is an example of Stretch blow molding process?
 a) Toy bodies b) Door liners
 c) Bottles d) Pipes
 Q.3 Films are thicker than sheets.
 a) True b) False
 Q.4 What are the three major parts of injection molding machine?
 a) Clamping unit, mold and injection unit
 b) Cavity, Core & Ejector
 c) Monitor, Barrel & Mold
 d) None of the above

Q.5 Which of the following material requires pre-drying before injection molding?

- a) PE b) PP
- c) ABS d) LDPE

Q.6 The plastics materials are melted in the _____.

- a) Mold b) Barrel
- c) Motor d) Hopper

Q.7 In blow molding process, the molten plastics extruded from an extruder is called:

- a) Bubble b) Parison
- c) Pipe d) Sheet

Q.8 Bottles for mineral water are usually made by

- a) Injection Blow Molding
- b) Extrusion Blow Molding
- c) Injection Molding
- d) Pipe Extrusion

Q.9 What part of extruder drives the screw?

- a) Barrel b) Main motor
- c) Hopper d) Screw

Q.10 Some of the important molding parameters are

- a) Injection pressure, Switch over point and Dosage stroke
- b) Mould closing speed
- c) Ejector speed
- d) None of the above

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

Q.11 What is the function of tie bar in injection molding machine?

Q.12 Give two causes of wrinkle in blown films.

Q.13 Define orientation.

Q.14 What is the standard Helix angle of screw?

Q.15 Define Parison.

Q.16 Expand the term SBM.

Q.17 What is the function of screen pack?

Q.18 Which machine is used for wire coating?

Q.19 Define Laminates.

Q.20 Write two defects arises in multilayer extrusion.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

Q.21 Explain difference between injection and extrusion blow moulding.

Q.22 Explain Injection stretch blow moulding process.

Q.23 Discuss co-extrusion process for manufacturing sheets.

Q.24 Explain advantages of Multi-layer blown films process.

Q.25 Explain the uses of plastic-paper laminates.
