

- Q.29 Explain the coloured discharging on reactive ground.
- Q.30 Mention any 04 advantages of roller printing.
- Q.31 Write a short note on historical background of printing.
- Q.32 Write down the importance of printing paste.
- Q.33 Write a note on importance of after treatment in printing.
- Q.34 Explain sublimation transfer printing.
- Q.35 Write a short note on various squeeze systems used in rotary screen printing.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain the various printing ingredients used in preparation of printing paste also list their function and importance.
- Q.37 Explain the working of Rotary screen-printing machine.
- Q.38 Write a short Note on
- Wet transfer printing machine
 - Properties of dye and paper used in transfer printing.

No. of Printed Pages : 4

Roll No.

032544/032535/2544

4th Sem / Textile Design

Subject:- Printing Technology/Printing Tech. II

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Which of these is not a style of printing?
- Direct
 - Discharge
 - Resist
 - Reactive
- Q.2 The process of controlled application of single/multicolour on fabric is called _____
- Finishing
 - Printing
 - Mercerization
 - None of these
- Q.3 Block are made up of _____
- Wood
 - Silver
 - Copper
 - Steel
- Q.4 Give an example of natural thickener.
- Starch
 - Hydros
 - Urea
 - None of these
- Q.5 In the case of discharge style cloth is first dyed then _____ agent is applied which destroy ground color.
- Discharging
 - Starch
 - Exhausting
 - None of these

- Q.6 _____ is used to remove extra colour from unengraved portion in roller printing.
- a) Colour doctor b) Back Grey
- c) Lapping d) Furnisher Roller
- Q.7 White Resist is a _____ of printing.
- a) Beginning b) Style
- c) Method d) None of these
- Q.8 _____ has affinity for vat dyes.
- a) Cotton b) Nylon
- c) Polyester d) None of these
- Q.9 _____ agent is added to printing paste to reduce foam formation.
- a) Hygroscopic b) defoaming
- c) exhausting d) None of these
- Q.10 _____ dye is most suited for polyester materials.
- a) Reactive Dye b) Disperse
- c) Direct Dye d) None of these

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Hygroscopic agent is added in printing paste _____.
Q.12 Batik is a kind of _____ printing (Resist/direct style)
Q.13 For colour discharge the ground colour should be strong. (True/False)

- Q.14 What is the objective of adding hygroscopic agent.
- Q.15 Name different methods of printing?
- Q.16 What is the function of colour doctor
- Q.17 What is Direct style of printing?
- Q.18 Give an example of a defoamer?
- Q.19 Furnisher roller is part of _____ printing. (Roller/Block)
- Q.20 In _____ printing ground is not dyed before printing (Discharge/Resist)

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Differentiate between dyeing and printing.
- Q.22 Comparison between rotary screen and roller printing.
- Q.23 What are the requirements of paper and dye to be used in transfer printing?
- Q.24 Write down any four advantages of Flat bed screen printing.
- Q.25 Discuss the merits and demerits of transfer printing.
- Q.26 Write down any 04 limitations of Block printing.
- Q.27 Differentiate the principle behind discharge and resist printing with suitable example.
- Q.28 Differentiate between ground colour and illuminating colour.
