

- Q.31 Explain the importance of fiber length in brief.
 Q.32 What is the need of sampling?
 Q.33 Discuss the use of Twist Multiplier in deciding the property of yarn? Explain in brief.
 Q.34 Describe caustic soda method for measuring maturity of cotton.
 Q.35 Explain the squaring and cut squaring sampling techniques in brief.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain the working principle of a micronaire with the help of a neat and clean diagram.
 Q.37 Explain the working of Shirley trash analyser in brief with the help of an illustrated diagram.
 Q.38 Explain the yarn numbering system in detail along with example and definition of each type.

No. of Printed Pages : 4

Roll No.

4th Sem / TEXTILE DESIGN Subject:- Testing & Quality Control-I

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Conditioning oven is an equipment used to measure
 a) Moisture regain b) Relative humidity
 c) Fiber fineness d) None
- Q.2 The strength of cotton fiber _____ with the increase in humidity
 a) Increases b) Decreases
 c) No change d) None
- Q.3 The roller setting in machines is done according to
 a) Effective length b) Mean length
 c) span length d) None
- Q.4 The fibers having length equal to or less than half of effective length is known as
 a) Long fiber b) Short fiber
 c) Both A & B d) None
- Q.5 The spinning limit of fiber depends upon
 a) Fiber length b) Fiber maturity
 c) Fiber fineness d) None

 032553/2553

- Q.6 Which of following equipment is based on Airflow principle
 a) Baer sorter b) Twist tester
 c) Sheffield Micronaire d) None
- Q.7 _____ = TM Count
 a) Tex b) Denier
 c) TPI d) None
- Q.8 Caustic soda swelling method is used to measure
 a) Cotton strength b) Cotton maturity
 c) Cotton fineness d) None
- Q.9 Tex 590.5/?
 a) English count b) Metric count
 c) Denier d) None
- Q.10 Following equipment is used to measure cleaning efficiency of a machine
 a) Trash analyser b) Sheffield micronaire
 c) Baer sorter d) None

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Speeds and settings of the machine are done on the basis of _____ length of the fiber.
- Q.12 Fiber length is measured by the help of _____ equipment.
- Q.13 Give an example of direct count.
- Q.14 _____ is used as universal count.

(2) 182545/122545/
032553/2553

- Q.15 The strength of cotton fibers increases with increase in humidity. (True/False)
- Q.16 Define relative humidity.
- Q.17 Define Z-twist.
- Q.18 Define metric count.
- Q.19 What is the moisture regain of nylon?
- Q.20 Name the equipment used to measure the fiber fineness.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Write the aim and scope of quality control program in brief.
- Q.22 Explain air flow principle in brief.
- Q.23 Why Tex is used as universal count? Explain in brief.
- Q.24 Differentiate between random and biased sample.
- Q.25 Find the resultant count of three ply yarns made of 10^s, 20^s and 30^s
- Q.26 Describe the procedure of measuring yarn count with the help of Beesley balance.
- Q.27 Give any three reasons for textile testing.
- Q.28 Explain the effect of twist on yarn properties.
- Q.29 How will you measure English count with the help of wrap reel.
- Q.30 A lea of 25 yards of cotton weights 50 grains. Calculate its count in the cotton system.
