

- Q.28 Why wettability is important? How it is evaluated?
- Q.29 How crease recovery of fabric is tested? Explain it.
- Q.30 Given that EPI = 75, Count of warp = 30 Ne, and crimp being 5% calculate weight of warp for 100 yards in pound.
- Q.31 What precautions are taken for fabric sampling?
- Q.32 How a double rip tongue tear tester works? Explain.
- Q.33 Write down the working procedure of ICI Pilling box with sample procedure.
- Q.34 What is the significance of pilling in fabrics? Explain the different parameters which affects the pilling.
- Q.35 What are the main causes of fabric shrinkage, and how it will be measured.

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
- Q.36 Explain the working principle, procedure, and significance of tensile strength testing of fabrics using the Tensile Strength Tester. Discuss different methods used such as the strip and grab test.
- Q.37 What is tearing strength? Describe the method of testing tearing strength of umbrella and parachute fabrics using the Elmendorf Tearing Strength Tester.
- Q.38 Discuss the importance of air permeability in functional textiles such as sportswear, medical textile, and Parachutes. How does fabric structure influence permeability?

No. of Printed Pages : 4 182761/122761/032761
Roll No.

6th Sem / Textile Technology Sub : Textile Testing & Quality Control-II

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Strip method and grab method are used for _____.
a) Measuring crease recovery
b) Measuring air permeability
c) Testing tensile strength
d) Packaging
- Q.2 The main objective of tensile testing is
a) To evaluate air permeability
b) To measure stiffness
c) To determine resistance to stretching & breaking
d) To determine color fastness
- Q.3 Bursting strength test is suitable for
a) Woven fabrics only b) Knitted fabrics only
c) All types of fabrics d) Parachutes only
- Q.4 Air permeability is defined as
a) Resistance to tearing
b) Ability of air to pass through fabric
c) Fabric elongation
d) None of them
- Q.5 High crease recovery angle indicates
a) Poor crease resistance
b) Good wrinkle recovery

- c) Low air permeability
- d) Length distribution
- Q.6 Evenness testing helps in
 - a) Reducing dye costs
 - b) Increasing shrinkage
 - c) Making fabric stiffer
 - d) Predicting fabric quality
- Q.7 Yarn evenness refers to
 - a) Tensile properties
 - b) Uniformity in yarn thickness
 - c) Colour fastness
 - d) Flammability
- Q.8 Twist is _____ turns given to fibres bundle
 - a) Spiral b) Round
 - c) Smooth d) Square
- Q.9 Spray test is related to
 - a) Flammability b) Waterproofing
 - c) Drape d) Yarn count
- Q.10 USTER Tensorapid is used to measure single yarn _____.
 - a) Twist b) Quality
 - c) Irregularities d) Strength

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 What does a Tensile Strength Tester measure?
- Q.12 What is the standard unit of fabric thickness?
- Q.13 What is air permeability in textiles?
- Q.14 What does the Shirley Crease Recovery Tester measure?

(2) 182761/122761/032761

- Q.15 What instrument tests the wear and abrasion of fabrics?
- Q.16 Name 2 instruments used in abrasion and drape testing.
- Q.17 What is fabric crimp?
- Q.18 What does a flammability test determine?
- Q.19 Which tester is used for light fastness?
- Q.20 What causes pilling on fabric surfaces?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 How do you calculate the tensile strength of a fabric using a tensile strength tester? Explain the formula and units used?
- Q.22 Describe the working principle of a hydraulic bursting strength tester. How is it used to measure the bursting strength of fabrics?
- Q.23 Explain the principle behind the Shirley Air Permeability Tester. How does this tester determine the air permeability of a fabric?
- Q.24 How do you measure the serviceability of a fabric using an abrasion tester? What factors should be considered during the testing process?
- Q.25 Define crimp in textiles and explain its significance in fabric structure. How is warp and weft crimp measured?
- Q.26 How is color fastness to perspiration tested? Discuss the importance of acidic and alkaline perspiration in determining fabric performance.
- Q.27 What are the causes of irregularities in yarn?
