

No. of Printed Pages : 4
Roll No.

188562

**Level-5, 2nd Sem/ DVOC
(Medical Image Technology)
Subject : Basic Imaging**

Time : 2 Hrs.

M.M. : 50

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Interpret the term cross over effect
- Q.2 Define pH scale.
- Q.3 Name the types of intensifying screens.
- Q.4 Define the term cine fluorography.
- Q.5 Define photographic density
- Q.6 Tell the purpose of image post-processing in medical imaging.
- Q.7 Name the different tests to check screen film contact and light leakage.
- Q.8 Name components in image quality-density.
- Q.9 Define photographic latent image.
- Q.10 Define positive process.

SECTION-B

Note: Very Short answer type questions. Attempt any six questions out of eight questions. (6x5=30)

- Q.11 Explain the key steps involved in the photographic process in basic imaging. Describe how each step contributes to the creation of a diagnostic image.
- Q.12 Discuss the layout and planning of dark room.
- Q.13 Explain the features of the characteristic curve in sensitometer.
- Q.14 Summarize the details of film materials in X-Ray.
- Q.15 How does ultrasound imaging work and what are its primary applications in medical diagnosis?
- Q.16 Discuss the terms:-
- a) Fluorography films
 - b) Light sensitive photographic materials
- Q.17 How does intensifying screen can be taken care of? List the tests to check screen film contact and light leakage.
- Q.18 Tell about the components responsible for quality of radiographic image for contrast and detail.

SECTION-C

Note: Long answer questions. Attempt any one questions out of two questions. (1x10=10)

- Q.19 Discuss the importance of film sensitivity and its relationship with X-Ray exposure in radiography. How can variations in film sensitivity impact image quality.
- Q.20 Discuss the given headings:
- a) Scattered radiation
 - b) Intensifying screens
 - c) Reciprocity failure
 - d) Graininess of film material
