

- Q.20 Discuss the importance of renewable energy in reducing green gas emissions. (CO1)
- Q.21 Explain the significance of proximate and ultimate analysis of coal. (CO2)
- Q.22 Describe briefly the process of generating power in a solar chimney power point. (Co5)

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x8=16)

- Q.23 Explain the construction and working of a flat plate solar collector. (CO4)
- Q.24 Explain the froth flotation method and its application in coal cleaning. (CO2)
- Q.25 Explain in detail the environmental impacts of burning fossil fuels. Suggest way to reduce these impacts. (CO1)

No. of Printed Pages : 4
Roll No.

220563B

6th Sem / Chemical

Subject : Energy Technology

Time : 3 Hrs.

M.M. : 60

SECTION-A

Note: Multiple choice questions. All questions are compulsory (6x1=6)

- Q.1 Which type of coal has the highest calorific value (CO2)
- a) Peat b) Lignite
- c) Bituminous d) Anthracite
- Q.2 Which of the following is not a Renewable source of energy (CO1)
- a) Tidal Energy b) Hydro energy
- c) Wind energy d) Nuclear energy
- Q.3 High temperature carbonization produces (CO2)
- a) Peat b) Coke
- c) Tar d) Anthracite

Q.4 Primary component of natural gas is (CO3)

- a) Methane b) Propane
- c) Butane d) Ethane

Q.5 Tidal energy is an example of- (CO4)

- a) Fossil Fuel b) Renewable energy
- c) Nuclear energy d) Geothermal energy

Q.6 Which solar power plant uses parabolic troughs (CO5)

- a) Central receiver system
- b) Solar Chimney plant
- c) Parabolic trough solar plant
- d) photovoltaic solar plant

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (6x1=6)

Q.7 Define geothermal energy. (CO4)

Q.8 Write one advantages of using solar collector for energy generating. (CO5)

Q.9 What is the primary purpose of refining petroleum. (CO3)

Q.10 Name the product formed during low temperature carbonization of coal. (CO2)

Q.11 Write the function of a solar cell. (CO5)

Q.12 Write an advantages of conventional energy source. (CO1)

SECTION-C

Note: Short answer type questions. Attempt any eight questions out of ten questions. (8x4=32)

Q.13 Compare conventional and Non-conventional energy source with example. (CO1)

Q.14 Describe the processing of crude oil using the three-stafe distillation method. (CO3)

Q.15 Explain briefly working of a thermal power plant. (CO4)

Q.16 Explain the chemical composition of natural gas and its uses in industrial household applications. (CO3)

Q.17 Discuss the applications of solar thermal energy. (CO5)

Q.18 Discuss the difference between horizontal and vertical axis wind turbine. (CO4)

Q.19 Discuss the conditions required for the safe storage of coal. (CO2)
