

No. of Printed Pages : 4

221933/181933/121933

Roll No.

/031933

**3rd Sem / DMLT, DMLT (For Speech
and Hearing Impaired)**

**Subject : Applied Clinical Biochemistry / Clinical
Biochemistry - III**

Time : 3 Hrs.

M.M. : 60

SECTION-A

Note: Multiple choice questions. All questions are compulsory (6x1=6)

Q.1 The enzyme SGOT is also called:

- a) Alanine transaminase
- b) Aspartate transaminase
- c) Acid phosphatase
- d) Lipase

Q.2 The compound formed from bilirubin in the intestine and excreted in feces is :

- a) Urobilinogen b) Stercobilin
- c) Biliverdin d) Prophyrin

Q.3 The substrate used in ALP estimation is:

- a) Urea

(1) 221933/181933/121933
/031933

- b) p-nitrophenyl phosphate
 - c) Starch
 - d) Glucose
- Q.4 The principle method for estimation of triglycerides is :
- a) Enzymatic colorimetric
 - b) Biuret
 - c) Jaffe's
 - d) Iodine method
- Q.5 The element essential for muscle contraction and bone formation is:
- a) Potassium
 - b) Calcium
 - c) Sodium
 - d) Chloride
- Q.6 The major site of amylase production in the body is:
- a) Liver
 - b) Pancreas
 - c) Kidney
 - d) Intestine

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (6x1=6)

- Q.7 Write two differences between direct and indirect bilirubin.

- Q.8 State the normal range of SGOT and SGPT in serum.
- Q.9 Mention two clinical uses of serum amylase estimation.
- Q.10 Define ALP and mention one clinical condition where it increases.
- Q.11 Write two functions of potassium in the human body.
- Q.12 Write two differences between HDL and LDL cholesterol.

SECTION-C

Note: Short answer type questions. Attempt any eight questions out of ten questions. (8x4=32)

- Q.13 Explain the steps involved in the formation and excretion of bilirubin.
- Q.14 Discuss the clinical significance of serum bilirubin estimation in different types of jaundice.
- Q.15 Explain the enzymatic reactions involved in SGOT estimation.
- Q.16 Explain the clinical significance of elevated SGOT and SGPT levels.
- Q.17 Describe the principle and procedure of serum amylase estimation by enzymatic method.
- Q.18 Write the principle and clinical significance of ALP estimation.

- Q.19 Explain the principle and procedure of estimation of ACP.
- Q.20 Write the procedure and principle for serum potassium estimation using flame photometry.
- Q.21 Discuss the importance and clinical role of calcium estimation in human serum.
- Q.22 Describe the principle of enzymatic estimation of triglycerides.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x8=16)

- Q.23 Describe in detail the different types and clinical importance of bilirubin.
- Q.24 Explain the principle, reagents, and clinical interpretation of SGPT estimation.
- Q.25 Discuss the formation of cholesterol and their clinical importance of lipid disorders.
