

No. of Printed Pages : 4
Roll No.

221934/181934/121934
/031926/1915

**3rd Sem / DMLT, DMLT(For speech
and Hearing Impaired)**

**Subject : Histopathology / Histopathology & Cytology-I /
Histopathology – II**

Time : 3 Hrs.

M.M. : 60

SECTION-A

Note: Multiple choice questions. All questions are compulsory (6x1=6)

Q.1 The main purpose of fixation in histology is:

- a) To harden the tissue
- b) To prevent autolysis and putrefaction
- c) To enhance staining
- d) To remove water from tissue

Q.2 Which of the following is a mordant used in staining?

- a) Xylene
- b) Alum
- c) Alcohol
- d) Formalin

Q.3 The embedding medium used in frozen section technique is:

- a) Calloidin
- b) Paraffin

(1) 221934/181934/121934
/031926/1915

- c) Gelatin
 - d) None (no embedding used)
- Q.4 A tissue processor (histokinete) is used for:
- a) Cutting sections
 - b) Dehydration and infiltration
 - c) Fixation
 - d) Staining
- Q.5 The special stain used for cytological smears to detect malignancy is :
- a) May-Grunwald Giemsa stain
 - b) Periodic acid-Schiff stain
 - c) Papanicolaou stain
 - d) Hematoxylin and Eosin stain
- Q.6 The term used for the collection and recording of histological specimens is:
- a) Preservation
 - b) Reception
 - c) Fixation
 - d) Mounting

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (6x1=6)

- Q.7 _____ is the decomposition of a dead body caused by bacterial activity.

- Q.8 _____ is the substance used to enhance the staining ability of dyes.
- Q.9 The process of removing paraffin wax from sections before staining is known as _____
- Q.10 The best routine stain for studying general tissue architecture is _____
- Q.11 _____ embedding is used for hard tissues such as bone and teeth.
- Q.12 The most commonly used mounting medium for permanent preparation is _____.

SECTION-C

Note: Short answer type questions. Attempt any eight questions out of ten questions. (8x4=32)

- Q.13 Define and differentiate between biopsy and autopsy.
- Q.14 Explain the process of reception and labeling of histological specimens.
- Q.15 Write short note on mordants.
- Q.16 Describe the role and working principle of an automatic stainer.
- Q.17 Write advantages of fixatives.
- Q.18 What are errors in section cutting, and how can they be corrected?
- Q.19 Write short note on tissue flotation bath.

- Q.20 Explain the principle and use of May-Grunwald and Giemsa staining in cytology.
- Q.21 Describe the steps involved in paraffin embedding.
- Q.22 Write a short note on frozen section preparation and its uses in diagnosis.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x8=16)

- Q.23 Describe in detail the composition, and functions of fixatives, with examples. Explain how fixation effects staining.
- Q.24 Explain the principle, mechanism, and detailed steps of tissue processing by paraffin technique, including dehydration, clearing, infiltration, and embedding.
- Q.25 Explain the principle and procedure of Gram staining in cytology and write precautions during staining.
