

- Q.17 Solve a simple problem converting yarn count from one system to another (give any example).
- Q.18 Differentiate between absolute humidity and Relative humidity.
- Q.19 Write a short note on trash content and its measurement.
- Q.20 Explain the principle of the Airflow (Sheffield Micronaire) method of measuring fibre fineness.
- Q.21 What is yarn twist? Describe its function in yarn structure.
- Q.22 Explain the twist measurement methods for single and ply yarns.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x8=16)

- Q.23 Discuss in detail the need of fixing standards, sampling, and the difference between random and biased samples.
- Q.24 Explain moisture relation in textile fibers and how humidity affects fiber properties.
- Q.25 Describe fiber maturity. Explain fiber length measurement using the Baer sorter, and the importance of fiber maturity & fiber length in textiles.

No. of Printed Pages : 4

222544

Roll No.

4th Sem. / Textile Design

Subject : Testing & Quality Control-I

Time : 3 Hrs.

M.M. : 60

SECTION-A

Note: Multiple choice questions. All questions are compulsory (6x1=6)

- Q.1 The main aim of textile testing is
- a) Evaluate material properties
 - b) Improve colour fastness
 - c) Increase labour cost
 - d) None
- Q.2 A sample that gives every item an equal chance of selection is called
- a) Biased sample b) Random sample
 - c) Stratified sample d) None

Q.3 The indirect yarn numbering system expresses yarn number as

- a) Weight per unit length
- b) Weight per unit area
- c) Length per unit weight
- d) Diameter per unit mass

Q.4 Moisture regain is defined as

- a) Water vapour present in the atmosphere
- b) Percentage of dry weight gained by moisture
- c) Water content per unit volume
- d) None

Q.5 Fibre fineness is measured by

- a) Baer sorter
- b) Shirley Trash Analyzer
- c) Airflow method
- d) None

Q.6 Twist direction in yarn may be

- a) A and B b) Up and down
- c) S and Z d) None

(2)

222544

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (6x1=6)

Q.7 Fixing _____ helps maintain uniform quality in production.

Q.8 The Shirley Trash Analyzer is used to measure _____ content in cotton.

Q.9 Moisture relation has no effect on fibre properties. (True/False)

Q.10 The method used to measure fibre maturity is the _____ swelling method.

Q.11 Twist multiplier helps determine the twist required for desired yarn properties. (True/False)

Q.12 Baer sorter method is use to measure fibre length. (True/False)

SECTION-C

Note: Short answer type questions. Attempt any eight questions out of ten questions. (8x4=32)

Q.13 State the aim and scope of textile testing.

Q.14 Explain the importance of quality control in textiles.

Q.15 What is sampling? Describe any two sampling techniques.

Q.16 Differentiate between direct and indirect yarn numbering systems.
