

Q.21 What are the factors affecting the tensile properties of textiles.

Q.22 Explain the phenomenon of crimp interchange in brief.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x8=16)

Q.23 Explain the process of measuring fabric tearing strength using the Elmendorf Tearing Tester.

Q.24 Discuss the importance of measuring single yarn strength. Explain the method to measure single yarn strength?

Q.25 Discuss the various types of fabric defects and faults. Explain how these defects can be identified production and provide solutions to rectify them.

5th Sem / Textile Design

Subject : Testing & Quality Control - II

Time : 3 Hrs.

M.M. : 60

SECTION-A

Note: Multiple choice questions. All questions are compulsory (6x1=6)

Q.1 Crease recovery refers to

- a) The ability of a fabric to resist stains
- b) The resistance of fabric to wear
- c) The ability of the fabric to regain its original shape after being creased.
- d) The ability of fabric to resist shrinking

Q.2 Serviceability of fabric depends on

- a) Its aesthetic appearance only
- b) Its performance and durability in various conditions
- c) The cost of the fabric
- d) Its ability to hold color over time

Q.3 Fabric abrasion resistance is

- a) The ability of a fabric to resist tearing

- b) The fabric's ability to withstand damage caused by rubbing or friction
 - c) The ability of the fabric to withstand dyeing processes
 - d) The resistance to shrinkage
- Q.4 Which of the following is NOT a common fabric fault?
- a) Uneven dyeing b) Slubs in the yarn
 - c) Pilling d) Fabric stiffness
- Q.5 A fabric with high stiffness is likely to
- a) Retain its shape well and resist wrinkling
 - b) Be very soft and flexible
 - c) Have a loose texture
 - d) Be very prone to tearing
- Q.6 The full form of CRL is
- a) Constant rate of leading
 - b) Constant rate of loading
 - c) Cotton rate of loading
 - d) None of the above

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (6x1=6)

- Q.7 Single yarn strength is a measure of the breaking strength of a single yarn.(True/False)

(2)

222554

- Q.8 Lea strength is measured by testing a twisted bundle of yarns, known as a _____
- Q.9 The bursting strength of fabric measures its resistance to tearing.(True/False)
- Q.10 Define handle.
- Q.11 Write the full form of CSP.
- Q.12 The unit GSM stands for grams per _____ meter.

SECTION-C

Note: Short answer type questions. Attempt any eight questions out of ten questions. (8x4=32)

- Q.13 What are the principles of CRL and CRE? Discuss their applications in yarn strength testing.
- Q.14 What is bursting strength in fabric, and how is it measured? Why is it important in fabric testing.
- Q.15 How does fabric pilling affect its appearance and durability?
- Q.16 Differentiate between cut strip and revelled strip method.
- Q.17 Define fabric serviceability and explain how it is evaluated in textile testing.
- Q.18 Explain the procedure for GSM measurement of fabric.
- Q.19 Explain the grab method for tensile strength testing.
- Q.20 How will you calibrate tearing strength tester? Explain in brief.
