

- Q.36 Describe inheritance and explain the various types of inheritance with the help of suitable examples.
- Q.37 What are various data types in python? What are various operations performed on each?
- Q.38 Explain different type of operators used in Python with example.

SECTION-D

Q.36 Describe inheritance and explain the various types of inheritance with the help of suitable examples.

Q.38 Explain different type of operators used in Python with example.

5th Sem. / Comp
Subject : Computer Programming Using Python

M.M. : 100

SECTION-A

Q.1 The extension of a Python Script File is ____.

a) .py b) .pyy

c) .pie d) None these

Q.2 which of the following is not a feature of python language?

a) Interpreted b) General purpose

c) Object d) Machine dependent

Q.3 Which code is used to open a file for binary writing?

a) "w" b) "wb"

c) "r+" d) "a"

Q.4 What does the 'len()' function in Python do?

a) It returns the total number of elements (length) in a list.

b) It returns the sum of all elements in a list

c) It returns the largest element in a list

d) It returns the smallest element in a list

- Q.5 Which keyword is used for a function?
 a) Fun b) Define
 c) Def d) Function
- Q.6 Which method in Python is used to format strings?
 a) Str() b) format()
 c) print() d) input()
- Q.7 What does the input() function do?
 a) Outputs data to the console
 b) Converts data types
 c) Reads data from the user
 d) Performs calculations
- Q.8 Which of the following is a valid way to comment out a single line in Python?
 a) //this is a comment b) /* this is a comment*/
 c) #this is a comment d) <!-- This is a comment-->
- Q.9 Which among the following are mutable objects in Python?
 a) List b) Integer
 c) String d) Tuple
- Q.10 _____ keyword is used for defining a class in Python.
 a) Class b) Object
 c) Return d) None

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (10x1=10)

- Q.11 Is Python is an object-oriented language? (True/False)
 Q.12 Python Language was developed by _____.

(2) 180853/170853

- Q.13 What is result of “abc” > “aaa” statement in python.
 Q.14 _____ block lets you test a block of code for errors.
 Q.15 Looping is used to execute the statement again and again. (True/False)
 Q.16 _____ module is used for regular expression.
 Q.17 Functions in Python will always return a value. (True/False)
 Q.18 Python functions can only accept a fixed number of arguments. (True/False)
 Q.19 The elements of a list can be accessed by using which operator?
 Q.20 Write any one logical operator in python.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Differentiate between Lists and Tuples.
 Q.22 Briefly explain History and Versions of Python?
 Q.23 What are functions? Explain with example the process of creating an calling a function.
 Q.24 Explain the concept of exception handling in Python.
 Q.25 What is a tuple? How to find size of a tuple.
 Q.26 What are string operators? Explain any three string functions.
 Q.27 Explain various mode of opening a file in Python?
 Q.28 What is class? How it is created and used in Python?
 Q.29 Write the difference between for loop and while loop.
 Q.30 What are various operators in python?

(3) 180853/170853
