

- Q.33 State mechanism of dyeing with Acid dyes?
- Q.34 Describe the various types of VAT Dyes available for cotton dyeing.
- Q.35 Write down any three methods of improving fastness properties of direct dyed cotton material.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain properties, methods of application and classification of reactive dyes.
- Q.37 Classify vat dyes, mention reaction mechanism to explain vatting, cycling, oxidation with conditions of application?
- Q.38 Discuss the application of sulphur Dyes on cotton material.

No. of Printed Pages : 4

182541/122541/032532

Roll No.

4th Semester/ Text. Design Subject : Dyeing Technology-I

Time : 3 Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Reactive Dyes forms _____ bond with cotton.
a) Covalent b) Hydrogen bond
c) None of these d) Both A & B
- Q.2 Write down the formula of soda ash?
a) Na_2CO_3 b) NaOH
c) NaCl d) None of these
- Q.3 Direct dyes are mainly used for dyeing of _____ fibre.
a) Wool b) Cotton
c) Polyester d) Nylon
- Q.4 Give example of an exhausting agent?
a) H_2O_2 b) NaOH
c) NaCl d) None of these
- Q.5 Anionic Dyes are also known as _____
a) Acid Dyes b) Azoic Dyes
c) Remazol Dye d) Basic Dyes

- Q.6 Presence of calcium and magnesium minerals in water cause _____ in water.
- a) Softness b) Hardness
c) Vat Dyes d) None of these
- Q.7 In cotton processing industry we prefer use of _____?
- a) Hard water b) Soft water
c) Both A & B d) None of these
- Q.8 Treatment with OBA increases _____?
- a) Absorbency b) Dye uptake
c) Brightness d) None of these
- Q.9 Naphtholisation and Diazotisation steps are related with _____
- a) Acid Dyes b) Azoc Dyes
c) Remazol Dyes d) Basic Dyes
- Q.10 Cellulosic materials are mostly dyes with _____?
- a) Reactive b) Disperse Dyes
c) Basic Dyes d) None of these

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (10x1=10)

- Q.11 What is affinity of a dye?
- Q.12 Why reactive dyes are called so?
- Q.13 Bronziness arises in dyeing with _____ dye. (Vat/Sulphur)?
- Q.14 Pigments are water soluble. (True/False)
- Q.15 Define Hardness.
- Q.16 Why Vat dyes are called so?

(2) 182541/122541/032532

- Q.17 Define Dye.
- Q.18 Name two water soluble dyes.
- Q.19 Cellulosic materials are dye with vat dyes. (True/False)
- Q.20 Reactive dye form _____ bond with cellulose.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 List any five properties of sulphur dyes.
- Q.22 Explain any three methods by which fastness properties of direct dyes fabric can be increased.
- Q.23 Write down the importance of soft water in dye house.
- Q.24 Explain the Naphtholisation and Diazotization Process.
- Q.25 Explain any two methods of removing permanent hardness of water.
- Q.26 Discuss the application of sulphur dyes on cotton material.
- Q.27 Explain the mechanism of dyeing of cotton with direct dyes.
- Q.28 Write down the short note on the applications and importance of OBA.
- Q.29 Brief discuss the history of dye stuff and classify coloring matters.
- Q.30 Write down the details of vatting temperature, dyeing temperature and concentration of NaCl NaOH for IN, Iw, lk types of vat dyes.
- Q.31 What is the hydrolysis of reactive dyes?
- Q.32 What are various types of hardness? Write down the methods of removing temporary Hardness.
