

- Q.30 Explain lap preparation for combing.
- Q.31 Difference between open loop and close loop auto levelling system.
- Q.32 Mention common defect found in sliver laps.
- Q.33 Draw a neat diagram of a modern high-speed flyer frame and explain the working of each major component.
- Q.34 Discuss the settings and adjustments in a draw frame that affect sliver quality, including roller settings, break draft and total draft.
- Q.35 Describe the passage of material through a comber machine with a neat labelled diagram, explaining the function of each part.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain the construction and working principle of ribbon lap machine. Discuss how it improves the quality of lap fed to the comber. Describe the passage of material through a ribbon lap machine with a neat labelled diagram, explaining the function of each part.
- Q.37 Explain the Combing Cycle in detail.
- Q.38 Explain constructional features and working principle of a sliver lap machine, including the feeding arrangement drafting zone and lap forming mechanism.

No. of Printed Pages : 4

Roll No.

4th Semester/ Text. Tech. Subject : Spinning Technology-II

Time : 3 Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 How many passages of drawing are generally used in modern spinning mills?
- a) 1 Passage b) 2 passages
c) 3 Passages d) 4 Passages
- Q.2 What is the typical draft range in a draw frame?
- a) 1-2 b) 2-6
c) 6-12 d) 12-20
- Q.3 The typical noil percentage in cotton combing is :
- a) 1-2% b) 5-15%
c) 20-25% d) 30-35%
- Q.4 Waste removed in combing is called:
- a) Sliver b) Lap
c) Noil d) Nep

- Q.5 Output of sliver lap is used in :
- Ring frame
 - Comber
 - Speed frame
 - Carding
- Q.6 Feed materials to ribbon lap machine is :
- Slivers
 - Sliver lap
 - Roving
 - Yarn
- Q.7 Speed frame is also called:
- Flyer frame
 - Ring Frame
 - Draw frame
 - Comber
- Q.8 Twist inserted in speed frame is:
- High
 - False
 - Low
 - Medium-High
- Q.9 Sliver from draw frame is deposited in :
- Bobbin
 - Beam
 - Spool
 - Can
- Q.10 The material produced at the comber delivery is :
- Roving
 - Lap
 - Combed sliver
 - Yarn

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (10x1=10)

- Q.11 Write one objective of draw frame.

- Q.12 What is Twist.
- Q.13 Define doubling?
- Q.14 What is main draft?
- Q.15 Define comber?
- Q.16 What is the role of autoleveller in draw frame?
- Q.17 What is the Sliver lap Machine?
- Q.18 Write main function of calendar roller?
- Q.19 Define Noil percentage.
- Q.20 What is main task of speed frame?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Write objective of sliver lap.
- Q.22 Explain equalizing, parallelizing.
- Q.23 What is the role of drafting in a draw frame?
- Q.24 Explain the working principle of ribbon lap.
- Q.25 Explain the role of the detaching rollers in a comber?
- Q.26 Define Twisting? Types of twist with diagram.
- Q.27 Discuss Building Motion in speed frame.
- Q.28 List the main components of a sliver lap and briefly explain the function of each.
- Q.29 Explain the drafting system used in a speed frame.
