

- Q.26 Explain working of vibrating screen.
- Q.27 Name properties of fluids.
- Q.28 Explain dehumidification and humidification.
- Q.29 Describe working of jaw crusher.
- Q.30 List portable power driven machines.
- Q.31 Name equipments that can be used to determine particle size.
- Q.32 Differentiate open and closed system.
- Q.33 Name drying equipment. Explain any one.
- Q.34 Explain process of electrostatic precipitation.
- Q.35 Explain working of rotary drum filters.

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
- Q.36 Discuss construction and working of ball mill.
 - Q.37 Explain process of particle size determination by sieving.
 - Q.38 Describe three modes of heat transfer.

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Which method can be used to determine particle size of solids?
 - a) Microscope b) Sieving
 - c) Sedimentation d) All of these
- Q.2 Heat transfer in liquids takes place by _____ mode.
 - a) Conduction b) Convection
 - c) Radiation d) Both A & C
- Q.3 Which of the following equipment is used for size separation.
 - a) Grizzlies b) Microscope
 - c) Ball mill d) Attritor
- Q.4 Which if the following units can be used to for density
 - a) Kg/gm³ b) g/ml
 - c) kg/m d) gram/Celsius
- Q.5 System consists of more than one phase is called a
 - a) Homogeneous system
 - b) Heterogeneous system

- c) Open system
d) Adiabatic
- Q.6 _____ is type of mixer which typically used to blend multiple dry components until they are homogenous?
- a) Jaw crusher b) Wet mixer
c) Dry mixer d) Drying oven
- Q.7 The objective of size reduction is
- a) Break big size to smaller size
b) Make the material of desired size
c) Make the material of desired size range
d) All of these
- Q.8 At critical speed for ball mill
- a) Milling time decreases
b) Milling time increases
c) No milling takes place
d) Ball mill breaks
- Q.9 Example of dryer is
- a) Shelf b) Hot Floor
c) Tunnel d) All of these
- Q.10 Which equipment can be used to separate solids from gases
- a) Cyclone Separator
b) Electrostatic Precipitator
c) Dust Collectors
d) All of these

(2) 180432/120432/030432

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 The system in which there is exchange of only energy is called _____.
- Q.12 Density is the ratio of mass _____.
- Q.13 Dry mixer can be used to mix two slips. (True/False)
- Q.14 Mixing can be carried out in agitator. (True/False)
- Q.15 Universe consists of system and surroundings. (True/False)
- Q.16 In heterogeneous system two phases are present. (True/False)
- Q.17 Specific volume is the volume occupied by per unit _____.
- Q.18 Jaw crusher is one type of milling equipment. (True/False)
- Q.19 In solids heat transfer takes place by convection. (True/False)
- Q.20 Ideal gas equation is _____.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Explain process of estimating drying rate.
- Q.22 Explain laminar flow.
- Q.23 Discuss critical speed of ball mill.
- Q.24 List purpose of size reduction.
- Q.25 List applications of Bernoulli's equation.
