

- Q.25 Explain pollution in glass industry.
- Q.26 Write composition of optical glass.
- Q.27 Explain attack of water on glass.
- Q.28 Discuss bad workmanship in glass industry.
- Q.29 Explain importance of optical fibre.
- Q.30 How will you determine softening of glass.
- Q.31 Explain density of glass.
- Q.32 Differentiate between plate glass and hollow glass.
- Q.33 Explain gob feeder.
- Q.34 Discuss blowing.
- Q.35 Explain refractive index of glass.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain the manufacturing method of glass working by fourcault process.
- Q.37 Explain different type of defects in glass. How these can be prevented
- Q.38 Describe the detection and measurement of strain in glass.

No. of Printed Pages : 4

180454/120454/030454

Roll No.

5th Sem / Ceramic Subject:- Glass Technology - II

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 The_____ can be removed by annealing.
 - a) Strain
 - b) Stress
 - c) friction
 - d) viscosity
- Q.2 Which forming method is used for the production of hollow glasses?
 - a) Blowing
 - b) Pressing
 - c) Drawing
 - d) Casting
- Q.3 The temperature at which a non-crystalline material transforms from a supercooled liquid to rigid glass is_____
 - a) Melting point
 - b) Glass transition temperature
 - c) Boiling point
 - d) Crystalline temperature
- Q.4 How much SiO₂ does borosilicate glass contain?
 - a) 70%
 - b) 73%
 - c) 80%
 - d) 91%

- Q.5 Which type of glass is regarded as the most heat resistant?
- a) Fused silica b) Aluminosilicate
c) 96% silica d) Borosilicate
- Q.6 Glass is a mixture of _____
- a) Non-metallic silicates
b) Metallic silicates
c) Metallic acetates
d) Non-metallic acetates
- Q.7 How many different categories of glass are there?
- a) 5 b) 4
c) 2 d) 3
- Q.8 Which of the following types of glass accounts for about 90% of manufactured glass?
- a) Potash-lime glass b) Soda-lime glass
c) Potash-lead glass d) Soda-lead glass
- Q.9 What changes are observed when a glass is heated?
- a) It becomes softer b) It bursts
c) It solidifies d) It disintegrates
- Q.10 ISO means
- a) international organism for standardisation
b) international organization for state
c) international ornament for standardisation
d) international organization for standardisation

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Strain in glass is produced by thermal stress.(T/F)
- Q.12 Formula of manganese oxide is _____. _____.
- Q.13 _____ colour gives iron oxides.
- Q.14 Bottles are made by _____ process.
- Q.15 Seeds are small glass bubbles.(True/False)
- Q.16 Annealing of glass means removing of _____ from glass.
- Q.17 Durability means resistance offered by glass to acid, alkali and _____
- Q.18 If stone is present in glass then appearance of glass will be destroyed.(T/F)
- Q.19 Strain is deformation which produced by stress of force. (T/F)
- Q.20 The fourcault process is a method of manufacturing flat glass. (T/F)

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Explain refining of glass.
- Q.22 Explain BASIC of ISO-9000.
- Q.23 Explain safety glass.
- Q.24 Explain fundamental concept of glassy state.
