

- Q.26 Write the principle behind the oven drying method for moisture determination?
- Q.27 How can food businesses detect and prevent instances of food fraud and economically motivated adulteration?
- Q.28 Explain the importance of training panelists in sensory analysis.
- Q.29 Discuss the role of sensory attributes in determining product quality.
- Q.30 How do color changes indicate food spoilage?
- Q.31 Discuss how texture influences consumer acceptance of food products.
- Q.32 Define Hazard Analysis and Critical Control Point (HACCP) and its primary objectives.
- Q.33 Define Good Laboratory Practices (GLP), and why are they essential in laboratory settings?
- Q.34 How does VACCP differ from TACCP?
- Q.35 Provide an example of a critical control point in a food production process.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Define quality in the context of food products. Explain how quality control and quality assurance contribute to achieving high-quality food products.
- Q.37 Describe the process of conducting a hazard analysis in HACCP.
- Q.38 Discuss the principle behind the Soxhlet extraction method for crude fat analysis. How does solvent extraction facilitate fat extraction from food samples?

No. of Printed Pages : 4

Roll No.

6th Sem / Food Technology Subject:- Food Analysis and Quality Control

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 The ash content in food is determined by:
a) Heating the sample to burn off organic matter
b) Extraction with solvents
c) Acid-base titration d) Gas chromatography
- Q.2 Which method is typically employed to determine crude fat content in food?
a) Soxhlet extraction b) Distillation
c) Colorimetry d) Electrophoresis
- Q.3 What is the primary objective of quality control?
a) Maximizing production efficiency
b) Ensuring product safety
c) Minimizing costs d) Maximizing profits
- Q.4 Quality control involves:
a) Preventing defects before they occur
b) Inspecting finished products only
c) Correcting defects after production
d) Ignoring customer feedback
- Q.5 Total Quality Management (TQM) lay stress on:
a) Productivity improvement only
b) Continuous improvement in all aspects of an organization
c) Strict adherence to standards without deviation
d) Centralized decision-making

- Q.6 What does quality control planning involve?
- Ensuring zero defects
 - Setting quality objectives and targets
 - Increasing production speed
 - Reducing customer complaints
- Q.7 Quality assurance focuses on:
- Preventing defects before they occur
 - Correcting defects after production
 - Increasing production speed
 - Maximizing profits through cost-cutting measures
- Q.8 Effective sampling techniques require:
- Consistently sampling from the same location
 - Sampling only during certain times of the day
 - Random and representative sampling
 - Sampling without consideration for product attributes
- Q.9 Viscosity is a measure of:
- Texture
 - Flavour intensity
 - Consistency
 - Colour uniformity
- Q.10 What role does viscosity play in food quality?
- Determines shelf-life
 - Affects texture and mouthfeel
 - Determines colour intensity
 - Indicates ripeness

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Flavour is a sensory attribute that encompasses taste, aroma, and mouthfeel. (True/False)
- Q.12 Consistency refers to the uniformity of texture in a food product. (True/False)

- Q.13 What does GHP stand for?
- Q.14 GMP primarily focuses on ensuring the cleanliness and hygiene of laboratory facilities. (True/False)
- Q.15 GLP primarily focuses on ensuring the accuracy, reliability, and integrity of laboratory testing procedures and data. (True/False)
- Q.16 HACCP is a proactive approach to food safety management, focusing on identifying and preventing potential hazards in food production processes. (True/False)
- Q.17 What does VACCP stand for?
- Q.18 TACCP strategies involve assessing and addressing _____ threats to food safety. (accidental/intentional)
- Q.19 HARPC requires food facilities to implement preventive controls based on identified _____. (hazards/profits)
- Q.20 Gloss is primarily determined by the fat content of a food product. (True/False)

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Define quality control, and why is it important in manufacturing?
- Q.22 Briefly describe food frauds, and how do they differ from food safety issues?
- Q.23 Briefly explain the concept of economically motivated adulteration (EMA) in the food industry.
- Q.24 Define Total Quality Management, and why is it important?
- Q.25 Write the principle behind the dry ashing method for ash determination.
