

- Q.27 Describe the ways through which energy can be stored.
- Q.28 Discuss the advantages and disadvantages of geothermal energy.
- Q.29 How to convert the hydrogen into electricity?
- Q.30 Energy storage is an important process. Why?
- Q.31 Discuss the methodology for preliminary energy audit.
- Q.32 Write about the instruments which are helpful in energy audit?
- Q.33 Write a discussion on benefits of energy sources in agriculture sector.
- Q.34 How energy can be obtained from biomass?
- Q.35 Write a short note on importance of energy conservation.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Discuss the importance of different energy sources in the present scenario.
- Q.37 What are the methods to obtain the thermal and electrical energy from solar?
- Q.38 How energy efficient technology is used in domestic and industrial sector? Explain it.

No. of Printed Pages : 4

181542/120942

Roll No.

4th Sem / IC, Elect, Power Station Engg., Elect. & Eltx. Engg.

Subject:- Principles of Energy Management / Energy Sources & Mgmt. of Elect. Energy

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 The energy strategies of companies have the principle of
- Restoring and preserving the environment
 - Reducing wastes and pollutants
 - Educating the people about energy conservation
 - All of these
- Q.2 Nuclear energy is obtained from the:
- Sun
 - Fossil fuels
 - Wind
 - Nucleus of an atom
- Q.3 Which of the following is a renewable source of energy?
- Oil
 - Coal
 - Natural Gas
 - Biomass
- Q.4 Hydroelectric power plants generate electricity using the energy of:
- Fossil fuels
 - Tides
 - Wind
 - Falling water

- Q.5 Geothermal energy is obtained from:
- The sun
 - The Earth's core
 - Biomass
 - Nuclear reactions
- Q.6 Which of the following is an advantage of using wind power?
- It is always available
 - It is cheap to produce
 - It does not emit pollutants
 - It requires a large amount of land
- Q.7 How energy conservation measures are classified?
- Low cost - high return
 - Medium cost - medium return
 - High cost - high return
 - all the above
- Q.8 Energy sources which are inexhaustible are known as
- Commercial energy
 - Primary energy
 - Renewable energy
 - Secondary energy
- Q.9 Material used for making solar cell
- Silicon
 - Carbon
 - Sodium
 - Magnesium
- Q.10 A device which is used to measure solar irradiance on a planer surface.
- Pyranometer
 - Net radiameter
 - Gardon Gauge
 - Pyrheliometer

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 What is energy?
- Q.12 What is tariff?
- Q.13 What is power factor?
- Q.14 Define fossil fuel.
- Q.15 Full form of MPPT.
- Q.16 Define Pyrolysis.
- Q.17 What do you understand by energy audit?
- Q.18 What is electricity?
- Q.19 What is photovoltaic cell?
- Q.20 What is thermal energy ?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 What are the differences between renewable and non-renewable energy?
- Q.22 What is wind energy, write down advantages and disadvantages of it?
- Q.23 Write a short note on consumption of energy in various field of science and technology.
- Q.24 Write the advantages and disadvantages of magneto hydro dynamic convertor.
- Q.25 What is load factor and how it can be improved for energy conservation?
- Q.26 Explain different types of tariff with their advantages.
