- Q.5 In atomic absorption spectroscopy which of the following is the generally used radiation source?
- Tungsten Lamp
  - Xenon mercury arc lamp
  - Hydrogen discharge lamp
  - Hollow cathode lamp
- Q.6 The thermistor whose resistance increases by increasing temperature.
- NTC thermistor
  - PTC thermistor
  - RTC thermistor
  - Any of these
- Q.7 Most pollution of rivers is due to the discharge sewage.
- True
  - False
- Q.8 Which of the statement is correct?
- Gas chromatography is used to analyse gases.
  - Gas chromatography is used to analyse solids.
  - Gas chromatography is used to analyse gases, solutions & solids
  - All of the above
- Q.9 What is dangerous to use in gas chromatography?
- Hydrogen
  - Nitrogen
  - Oxygen
  - None of these
- Q.10 Conductivity is defined as the ability to carry\_\_\_\_\_.
- Voltage
  - Resistance
  - Current
  - All of the mentioned

(2) 181552/121552/031565

## SECTION-B

**Note:** Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 List two sources of water pollution.
- Q.12 Name the electrodes used for pH measurement.
- Q.13 Define power plant.
- Q.14 Define transducer.
- Q.15 What is pH?
- Q.16 Define injector
- Q.17 Write the full form of AEI
- Q.18 What is Gas Pollutant?
- Q.19 Expand IOT
- Q.20 Expand LED

## SECTION-C

**Note:** Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 How water pollution monitoring is done?
- Q.22 Give a short note on electrodes used for pH measurement.
- Q.23 How Arduino can be used for monitoring the quality of water pollution.
- Q.24 Write down about pH measurement.
- Q.25 Explain electrochemical analysis.
- Q.26 Write down about mass spectroscopy in detail.
