

- Q.25 Explain the procedure for clotting time estimation.
- Q.26 Describe the composition of bone marrow.
- Q.27 Discuss the principles of Perl's iron staining.
- Q.28 Classify Leukemias briefly.
- Q.29 Write short note on LE cell phenomenon.
- Q.30 Explain the clinical significance of semen analysis.
- Q.31 Describe the principle of RBC counting in CSF.
- Q.32 Mention indications for bone marrow examination.
- Q.33 Differentiate between tart cell and LE cell.
- Q.34 Draw a well labelled diagram of Bone Marrow.
- Q.35 Give the procedure of Hess test.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Describe the process of haemostasis. Explain intrinsic and extrinsic pathways with diagrams.
- Q.37 Explain the methods of bone marrow aspiration, preparation of smears, staining, interpretation of myelogram, and M:E ratio.
- Q.38 Define Leukemia. Discuss FAB classification and laboratory diagnosis of acute leukemia.

No. of Printed Pages : 4

181942/121942/031942

Roll No.

4th Sem / DMLT

Subject : Hematology IV / Clinical Haema - IV

Time : 3 Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 The intrinsic pathway of coagulation is initiated by:
- a) Factor VII b) Factor XII
- c) Factor V d) Factor II
- Q.2 Platelets are also known as :
- a) Thrombocytes b) Leukocytes
- c) Reticulocytes d) Erythrocytes
- Q.3 The normal M:E ratio in bone marrow is:
- a) 1:1 b) 2:1
- c) 1:2 d) 4:1
- Q.4 Perl's reaction is used for detection of:
- a) Calcium b) Iron
- c) Potassium d) Sodium

Q.5 FAB classification is related to:

- a) Lymphoma b) Leukemia
- c) Thrombocytopenia d) Anemia

Q.6 LE cells are related to:

- a) SLE b) CML
- c) ITP d) Thalassemia

Q.7 Normal liquefaction time of semen is:

- a) 5-10 min b) 20-30 min
- c) 1 hour d) 2 hours

Q.8 The normal bleeding time by Ivy's method is:

- a) 1-3 min b) 2-7 min
- c) 15-20 sec d) 30-60 sec

Q.9 CSF cell count is usually performed using:

- a) Neubauer chamber b) Thoma pipette
- c) Wintrobe tube d) ESR tube

Q.10 Clot retraction test mainly evaluates:

- a) Platelet function b) Plasma proteins
- c) RBC morphology d) Neutrophils

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

Q.11 Define haemostasis.

Q.12 Name two coagulation factors.

Q.13 What is the role of platelets in clot formation?

Q.14 What is PTI?

Q.15 Give any one function of bone marrow.

Q.16 Expand FAB.

Q.17 What is a tart cell?

Q.18 Define semen viscosity.

Q.19 Mention one example of a biological fluid other than blood

Q.20 What is BT?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

Q.21 Explain the extrinsic pathway of blood coagulation.

Q.22 Describe the functions of platelets.

Q.23 Write a short note on APTT and its significance.

Q.24 Define bleeding disorders. Mention any two examples.
