

- Q.30 Discuss thermoset injection moulding process.
 Q.31 What are various process variable used in compression molding.
 Q.32 What is Short shot defect, how it can be removed.
 Q.33 Discuss Drape vacuum forming process.
 Q.34 Explain compression molding of SMC compounds.
 Q.35 Explain Plug assisted forming technique.

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
 Q.36 Explain principle construction and working of plunger type transfer moulding in detail with diagram.
 Q.37 Write short note on any two.
 a) Electroplating
 b) Vacuum metallization
 c) Filament winding
 Q.38 Write short note on any two
 a) Hand layup Technique
 b) Pultrusion
 c) Cell Casting

No. of Printed Pages : 4
 Roll No.

182245

4th Semester/ Plastic Subject : Plastic Processing Techniques-II

Time : 3 Hrs.

M.M. : 100

SECTION-A

- Note:** Multiple choice questions. All questions are compulsory (10x1=10)
 Q.1 Thermoforming process involves injecting of molten plastic into a mould cavity by application of compressed air:
 a) True b) False
 Q.2 Thermosetting materials are the polymeric materials which get soften on heating with or without pressure.
 a) True b) False
 Q.3 Which of the following materials in mostly used for making of thermoforming moulds?
 a) High Carbon Steel b) Grey cast iron
 c) Aluminum d) White cast iron
 Q.4 Stretching can improve the strength of end products.
 a) True b) False
 Q.5 What is the ideal material for processing in compression moulding?
 a) Plastics
 b) Termo plastics
 c) Thermo setting plastics
 d) Non-Ferrous materials

- Q.6 What is the purpose of guide pillars in compression moulding process?
 a) To retain the Shape b) To maintain pressure
 c) To improve Distance d) To ensure alignment
- Q.7 In thermoforming, plastic sheets are heated to _____.
 a) Boiling point b) Tg Point
 c) Sag Point d) Melting point
- Q.8 Which of the following is a property of thermosetting plastics?
 a) Can be molded
 b) Soft
 c) Recyclable
 d) Can be used at high temperatures
- Q.9 Which of the following is not an example of thermosets?
 a) Epoxy b) Teflon
 c) Vulcanized rubber d) Bakelite
- Q.10 Manufacturing of components having lengths and the constant cross sectional shape is done by _____ process.
 a) Roving b) Pultrusion
 c) Curing d) Pulling

SECTION-B

- Note:** Objective/ Completion type questions. All questions are compulsory. (10x1=10)
- Q.11 Polyurethanes plastics can be made in flexible foams even after belonging to thermosetting polymers (True/False)
- Q.12 What is the use of fibreglass in plastic?
- Q.13 Phenolics are commonly known as _____.

(2)

182245

- Q.14 Write the full form of MF.
- Q.15 Polyethylene, polypropylene and polyvinyl chloride (PVC) are the main example of thermosetting polymers (True/False)
- Q.16 Thermoforming is the same as blow moulding. (True/False)
- Q.17 Speed of production in transfer molding is higher than that of compression molding (True/False)
- Q.18 What is the function of plunger in Injection Moulding Machines?
- Q.19 Write two moulds materials used in forming technique.
- Q.20 Urea formaldehyde (UF) resins are used as adhesives for plywood and furniture. (True/False)

SECTION-C

- Note:** Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)
- Q.21 Explain Dough moulding compound.
- Q.22 What is film casting, write its advantage.
- Q.23 Explain various faults and their remedies of vacuum forming process.
- Q.24 What is engraving, what are its advantages.
- Q.25 Which type of heating system used in forming technique.
- Q.26 How to calculate injection or Ram pressure in transfer molding.
- Q.27 How the wall thickness is controlled in rotational molding process.
- Q.28 Explain the use of drilling.
- Q.29 Define shrinkage what are its disadvantages.
