

- Q.27 State the merits of preheating.
- Q.28 Advantage of hydraulic clapping system used in Injection molding.
- Q.29 Explain any defects and their remedies of injection molding.
- Q.30 Discuss blow up ratio and its importance in blown film process.
- Q.31 Write short note on Hopper and Hopper cooling.
- Q.32 Explain Ram/Plunger type injection molding with diagram.
- Q.33 Explain orientation of polymer and their effect on plastic product.
- Q.34 Write at least five comparison between extrusion blow molding and injection blow molding.
- Q.35 Discuss advantages of multilayer extrusion blow moulding.

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
- Q.36 With a neat sketch explain Reciprocating screw type injection moulding process.
- Q.37 Explain rotational moulding process with suitable example?
- Q.38 Explain principle of Blow molding process and explain extrusion blow molding in detail.

No. of Printed Pages : 4
Roll No.

5th Sem / Plastic Subject:- Plastic Processing Techniques - III

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Films are thicker than sheets.
a) True b) False
- Q.2 The plastics materials are melted in the _____.
a) mold b) barrel
c) motor d) hopper
- Q.3 Hopper cooling is done.
a) To prevent slipping of granules
b) To avoid bridge formation
c) To increase output
d) All of the above
- Q.4 What are the three major parts of injection molding machine?
a) clamping unit, mold, and injection unit
b) cavity, core, and ejector
c) monitor, barrel, and mold
d) none of the above

- Q.5 Which of the following material requires pre-drying before injection molding?
- a) PE b) PP
c) ABS d) LDPE
- Q.6 In which of the following plastic is used
- a) Automobiles b) Electrical appliances
c) Packaging d) All of the above
- Q.7 In blow molding process, the molten plastics extruded from an extruder is called :
- a) bubble b) parison
c) pipe d) sheet
- Q.8 Bottles for mineral water are usually made by
- a) injection Blow moulding
b) Extrusion Blow moulding
c) Injection Molding
d) Pipe extrusion
- Q.9 What part of extruder drives the screw?
- a) Barrel b) Main motor
c) Hopper d) Screw
- Q.10 Which of the following plastics cannot be reshaped?
- a) Thermoplastics
b) Thermosetting plastics
c) Both (a) and (b)
d) None of the above

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 What is the function of tie bar in injection molding machine?
- Q.12 Define Flash defect.
- Q.13 Define orientation.
- Q.14 What is the standard Helix angle of screw?
- Q.15 Define Parison.
- Q.16 Define helix angle
- Q.17 What is the use of screen pack?
- Q.18 Write name of machine is used for wire coating?
- Q.19 Define Cycle time.
- Q.20 Write any two defects arises in extrusion process.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Define thrust bearing give its uses.
- Q.22 Explain Injection stretch blow moulding process.
- Q.23 Discuss extrusion process for manufacturing bottles.
- Q.24 Explain advantages of Multi-layer extrusion blown molding.
- Q.25 Explain difference between injection and extrusion blow moulding.
- Q.26 Explain mold venting, why it is necessary.
