

- Q.27 Describe mechanical recycling of plastics.
- Q.28 Explain the importance of public participation in plastic waste management.
- Q.29 Describe the use of plastics in making eco-bricks.
- Q.30 Write any five safety measures for handling plastic waste.
- Q.31 What are the benefits of co-processing in cement industries?
- Q.32 Describe any two methods of polymer degradation.
- Q.33 Explain government rules regarding single-use plastics.
- Q.34 Explain the process of producing value-added plastic granules.
- Q.35 List five industries where recycled plastics are in high demand.

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
- Q.36 Explain with neat diagrams different methods of plastic recycling.
- Q.37 Describe in detail the stages of plastics waste management.
- Q.38 Discuss health and environmental hazards of plastic and give suggestions to reduce them.

5th Sem / Plastic

Subject:- Plastic Recycling and Waste Management

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Which of the following is a major source of plastic pollution?
- a) Industrial waste b) Agricultural waste
c) E-waste d) All of these
- Q.2 Which plastic waste management method involves burning of plastics?
- a) Recycling b) Incineration
c) Landfilling d) Composting
- Q.3 Which gas is commonly released during burning of plastics?
- a) Oxygen b) Carbon dioxide
c) Methane d) Helium
- Q.4 Which of the following plastics is recyclable?
- a) Thermosetting Plastics
b) Thermoplastics
c) Bakelite d) None
- Q.5 Which of these is used for making eco-bricks from waste plastic?

- a) Bottles filled with plastic
 - b) Cement blocks
 - c) Steel pipes
 - d) None
- Q.6 What is the main disadvantage of landfilling plastic waste?
- a) Reduces pollution b) Takes up land space
 - c) Produces electricity d) None
- Q.7 Which method uses high temperature without oxygen to break down plastic?
- a) Incineration b) Pyrolysis
 - c) Flotation d) Recycling
- Q.8 Which of these is a value-added product of recycled plastic?
- a) Compost
 - b) Road construction material
 - c) Fertilizers
 - d) All of these
- Q.9 What does “chemical recycling” involve?
- a) Melting and reshaping
 - b) Breaking polymers into monomers
 - c) Shredding
 - d) None
- Q.10 Which machine is used to convert plastic waste into pellets?
- a) Shredder b) Extruder
 - c) Lathe machine d) Grinder

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Define plastic pollution.
- Q.12 Name any two hazards caused by plastic waste.
- Q.13 Write two advantages of plastic recycling.
- Q.14 What is pyrolysis?
- Q.15 What is meant by co-processing in cement industries?
- Q.16 Write two disadvantages of plastic incineration.
- Q.17 Name two value-added products from recycled plastic.
- Q.18 What is meant by polymer degradation?
- Q.19 Write two uses of recycled plastic in construction.
- Q.20 Name any two commonly used thermosetting plastics.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Explain any three environmental hazards of plastic waste.
- Q.22 Differentiate between primary and tertiary recycling.
- Q.23 Write short notes on landfill disposal of plastics.
- Q.24 Explain the process of manual segregation of plastics.
- Q.25 List any five products made from recycled plastics.
- Q.26 What are the disadvantages of pyrolysis.
