

- Q.24 Discuss insert injection moulding.
 Q.25 Explain RIM process with suitable diagram.
 Q.26 Write short notes on melt spinning method.
 Q.27 Explain manufacturing process of corrugated sheets.
 Q.28 Explain plastic-paper laminates.
 Q.29 Explain Thin wall product moulding.
 Q.30 Discuss advantage of multilayer blown film extrusion.
 Q.31 Discuss advantage and disadvantage of multiplayer packaging.
 Q.32 Explain Plastic-Plastic Lamination.
 Q.33 Discuss tie bar less injection moulding.
 Q.34 Discuss atleast five trouble shootings of blow moulding process.
 Q.35 Discuss advantage of post treatment of fibres in textile processing.

SECTION-D

- Note:** Long answer type questions. Attempt any two questions out of three questions. (2x10=20)
 Q.36 Explain injection stretch blow moulding process and its types.
 Q.37 Discuss
 a) Wet spinning b) Dry spinning
 Q.38 Discuss characteristics and application
 a) High pressure injection foam
 b) Low pressure injection foam

No. of Printed Pages : 4
 Roll No.

6th Sem / Plastic Engineering Subject:- Plastic Processing Techniques-IV

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 In the cable extrusion process, what is the speed of product winding?
 a) 40 m/sec b) 50 m/sec
 c) 60 m/sec d) 70 m/sec
 Q.2 What is the typical gas used in Gas Assisted Injection Molding?
 a) Oxygen b) Nitrogen
 c) Helium d) Carbon dioxide
 Q.3 Stretch Blow Molding is commonly used for producing:
 a) Metal cans b) Automotive parts
 c) Plastic bottles for beverages
 d) Electronics components
 Q.4 Calendering is mostly suited for making _____.
 a) ABS b) PS
 c) PVC d) UF

(40)

Q.5 The main benefit of incorporating different layers with varying properties in multilayer blown film is _____.

- a) It simplifies the production process
- b) It reduces the overall film thickness
- c) It provides a uniform appearance
- d) It allows customization of the film's Performance characteristics

Q.6 _____ is the function of tie bar?

- a) Platen movement b) Melting
- c) To shape of the product
- d) trimming

Q.7 Give is the purpose of the outer skin layers in sandwich molding?

- a) To provide an aesthetic finish
- b) To increase the weight of the molded part.
- c) To protect the core material and enhance stiffness.
- d) To minimize the overall thickness of the part

Q.8 WAIM stands for _____

- a) Water associated injection moulding
- b) Water assisted injection moulding
- c) Water assisted intrinsic moulding
- d) None

Q.9 _____ is a process, which combine layers of two or more plastics together at a point of extrusion.

- a) Laminating b) Plating
- c) Co extrusion d) Calendaring

(2)

182263

Q.10 _____ is the primary purpose of the corrugated pattern in corrugated plastic sheets?

- a) To reduce the weight of the sheet.
- b) To make the sheet more transparent.
- c) To add strength and rigidity to the sheet.
- d) To increase the flexibility of the sheet.

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

Q.11 Define lamination.

Q.12 What is Needle punching?

Q.13 Give two causes of wrinkle in blown films.

Q.14 Expand RIM.

Q.15 Write two disadvantages of multilayer film extrusion.

Q.16 Give two examples of paper plastic laminates.

Q.17 Name two plastic materials used in textile industry.

Q.18 Give two advantages of thin wall injection moulding.

Q.19 Name two advantages of multilayer packaging.

Q.20 Write two application of injection blow moulding.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

Q.21 Explain Low pressure foam moulding.

Q.22 Discuss gas assisted injection mounding process.

Q.23 Discuss stretch blow muddling.
