

- Q.34 Explain types of creels used in warping.
Q.35 Write short note on percentage size pick-up.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Discuss objectives, limitations and working of sectional warping machine.
Q.37 Discuss various process control parameters in sizing.
Q.38 Describe different types of sizing methods and their applications.

No. of Printed Pages : 4

182744/122744/032744

Roll No.

4th Semester/ Text. Tech.

Subject : Weaving Preparatory Processes-II

Time : 3 Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 In sectional warping yarn is wound on :
a) Warp beam b) Drum
c) Cylinder d) Package
- Q.2 The main purpose of adhesives in sizing is:
a) Increase yarn count
b) Improve yarn strength
c) Improve dye absorption
d) Reduce twist
- Q.3 After sizing yarn weight _____.
a) Decrease b) Increase
c) Not changed d) None of them
- Q.4 Uneven tension in warping leads to :
a) Cross ends
b) Broken ends
c) Variation in fabric quality
d) All of these

- Q.5 Which one is not a sizing ingredient?
 a) Adhesives b) Lubricants
 c) Antifoaming agent d) Warp beam
- Q.6 Supply package for beam warping is _____.
 a) Fibre b) Fabric
 c) Ring bobbin d) Cone
- Q.7 Winding is the process of converting the smaller package into _____.
 a) Medium b) Normal
 c) Larger d) Very smaller
- Q.8 Sizing is carried out mainly on :
 a) Warp yarn b) Weft yarn
 c) Both warp & weft d) None
- Q.9 Blue is used to increase the _____ of yarn.
 a) Weight b) Length
 c) Whiteness d) Strength
- Q.10 Which device is used to feed yarn from packages in warping?
 a) Creel b) Tensioner
 c) Sizing box d) Roller beam

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (10x1=10)

- Q.11 Write one limitation of sectional warping.
 Q.12 Name two types of drying used in sizing.
 Q.13 Why sizing is done?
 Q.14 Name two methods of sizing.

- Q.15 Define creel capacity.
 Q.16 What is the function of antifoaming agents.
 Q.17 Write one feature of high-speed warping machine.
 Q.18 Name two types of winding.
 Q.19 Write one fault of beam warping.
 Q.20 State one function of stop motion in winding.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Explain different types of warping systems.
 Q.22 Describe working of sectional warping machine with diagram.
 Q.23 Explain common faults in sizing.
 Q.24 Discuss objective of warping in textile preparation.
 Q.25 Explain chamber drying with neat diagram.
 Q.26 Discuss the role of adhesives in sizing.
 Q.27 What are process control parameters in warping? Explain.
 Q.28 What is the importance of stop motion in winding?
 Q.29 Explain the working of disc type tensioner with sketch.
 Q.30 Write short note on hot air drying.
 Q.31 Explain the use of lubricants in sizing.
 Q.32 Differentiate between precision and non-precision winding.
 Q.33 Write importance of measuring and marking motion in sizing.
