

- Q.26 Describe the working of ICI pill box tester with neat diagram.
- Q.27 Discuss different types of yarn variations - short term, medium term, and long term.
- Q.28 Explain spray test method for evaluating fabric waterproofing.
- Q.29 Discuss the process of testing colour fastness to rubbing using crock meter
- Q.30 Discuss relaxation and felting shrinkage in fabrics.
- Q.31 Explain the Martindale abrasion tester with neat sketch.
- Q.32 Explain the working principle of stiffness tester with diagram.
- Q.33 Discuss the relation between porosity and air permeability of fabric.
- Q.34 Explain factors influencing crease recovery of fabrics.
- Q.35 Describe the working principle of tearing strength tester.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain the principle and working of a thickness tester with neat sketches.
- Q.37 Explain the working of Shirley Air Permeability Tester with neat sketches.
- Q.38 Explain the working principle of an Evenness Tester (Uster Tester).

No. of Printed Pages : 4

182761/122761/032761

Roll No.

6th Sem / Textile Technology Subject:- Textile Testing and Quality Control-II

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 In a tensile test, fabric specimen is subjected to
a) Compressive load
b) Tensile load until break
c) Bending load d) Torsional load
- Q.2 Which tester is used for tearing strength
a) Shirley stiffness tester
b) Elmendorf tester
c) Pilling tester d) Perspiration tester
- Q.3 Bursting strength is expressed in
a) $N \times cm^2$ b) N/cm^2
c) Nm d) Force
- Q.4 Fabric cover is related to
a) Openness or closeness of weave
b) Weight per unit area
c) Thickness only d) Colour of fabric
- Q.5 Serviceability of fabric refers to
a) Aesthetic properties
b) Wear life and durability

- c) Total Quantity Count
- d) Thermal properties
- Q.6 In Linen Count System no. of hank of _____ yards in one pound.
 - a) 300 b) 400
 - c) 840 d) 560
- Q.7 The unit of tensile strength of fabric is generally expressed in
 - a) $N \times cm^2$
 - b) Newton (N) or Newton per meter width
 - c) N/m d) g/cm^3
- Q.8 Fabric thickness is generally measured in
 - a) mm b) cm
 - c) microns d) Both a & c
- Q.9 Hydraulic bursting strength tester applies pressure through?
 - a) Water (fluid) b) Steam
 - c) Air d) Electric load
- Q.10 USTER-5 is used to measure yarn _____.
 - a) twist b) quality
 - c) mass variation d) strength

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 Drop penetration test is used for measuring _____.
- Q.12 Blend test of fabrics is carried out by _____ methods.

- Q.13 Crimp is the waviness in yarns in _____ and _____ direction.
- Q.14 The maximum force a fabric can withstand before breaking is called _____.
- Q.15 Parachute fabric mainly requires high _____ strength
- Q.16 Name two factors that affect the tensile strength of a fabric.
- Q.17 Define air permeability in fabrics.
- Q.18 Name one factor affecting crease recovery of fabrics.
- Q.19 Crimp in warp and weft is measured using which instrument?
- Q.20 Colour fastness to rubbing is checked using which tester?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Discuss the procedure of testing drape using a Drapmeter.
- Q.22 Write a detailed procedure for determining tensile strength of woven fabric.
- Q.23 Explain the method of finding the yarn count by Beesley balance.
- Q.24 Explain the hydraulic bursting strength tester with neat diagram.
- Q.25 Explain the solubility method of testing fibre blends in fabric.
