

- Q.28 How the performance of an engine is checked?
- Q.29 Mention various aviation safety regulations.
- Q.30 What are the limitations of carbon composition resistors and varistors?
- Q.31 How the rain protectors are serviced?
- Q.32 Write a brief note flying controls?
- Q.33 What is the working of turn and bank indicator?
- Q.34 How is fault free analysis is done?
- Q.35 What do you mean by CMM and ISO?

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain the different schedules for inspection of aircraft and its components? What is the coding scheme for electrical cables?
- Q.37 Explain the procedure conditional maintenance of engines. Explain tubular structure.
- Q.38 What are the various types of flying controls? What is the task of AME regarding the maintenance.

No. of Printed Pages : 4
Roll No.

147752

5th Sem / AME

Subject:- Aircraft Maintenance Practices

Time : 3Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 Where do the heavier checks (C-check and D-check) take place?
- Maintenance, repair and overhaul (MRO) company sites
 - Airport bay
 - Manufacturing sites
 - Hangar
- Q.2 The controlling authority for civil aviation operations is
- DCGA
 - EASA
 - FAA
 - DGCA
- Q.3 The maintenance carried out while an airplane is parked at an airport waiting for the next takeoff is generally referred to as _____
- Line maintenance
 - Major maintenance
 - General Maintenance
 - Base maintenance
- Q.4 Which is tested for in case of altimeter inspection
- deformations of the airframe surface

- b) static port heater
 - c) entrapped moisture
 - d) All of the above
- Q.5 The DC voltage in Air Craft is generally
- a) 24 V b) 48 V
 - c) 28 V d) 110 V
- Q.6 The protocol for ACARS was designed by _____
- a) Boeing b) ARINC
 - c) FAA d) ICAO
- Q.7 By correcting the indicated airspeed for nonstandard temperature and pressure, we obtain _____ airspeed.
- a) Actual b) Virtual
 - c) True d) Relative
- Q.8 Which of the following is the most important criterion in selecting an appropriate fuel to power an aircraft?
- a) Cost b) Density
 - c) Specific energy d) Efficiency
- Q.9 Which of the following is not true about an airframe made with carbon-fiber composite?
- a) Decreases drag
 - b) Decreases thrust
 - c) Higher cabin pressurization
 - d) Higher wing aspect ratio
- Q.10 Most retraction systems are _____ operated.
- a) Thermally b) Hydraulically
 - c) Mechanically d) Electronically

SECTION-B

Note: Objective type questions. All questions are compulsory. (10x1=10)

- Q.11 What is the role of DGCA in aviation.
- Q.12 What is engine depreservation?
- Q.13 What do you mean by a service letter?
- Q.14 What is types of inspection after shock landing?
- Q.15 How a crack in the airframe detected?
- Q.16 What are main components of fuselage structure?
- Q.17 Name two AC and DC instruments used in aircraft?
- Q.18 Name two power operated controls in the aircraft?
- Q.19 What is zero defect analogy?
- Q.20 What is the purpose of aviation safety regulations?

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Explain briefly various aircraft manuals.
- Q.22 What are the different controls to operate flight?
- Q.23 Explain air speed indicator?
- Q.24 What is a bonding continuity test?
- Q.25 Describe engine on condition maintenance?
- Q.26 How engine is stored engine in short term?
- Q.27 What is the use of compressor bleed air?
