SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 What is an abattoir?
- A facility of processing fish
 - A plant for manufacturing canned goods
 - A slaughterhouse
 - A facility for growing crops
- Q.2 Which of the following is a basic preparatory procedure in meat processing?
- Pasteurization
 - Culmination
 - Fermentation
 - Irradiation
- Q.3 What is the purpose of emulsification in meat processing?
- To tenderize the meat
 - To mix fat and water components
 - To enhance flavour
 - To preserve the meat
- Q.4 Which type of meat product undergoes curing and smoking?
- Ham
 - Fresh sausage
 - Ground beef
 - Chicken breast

- Q.5 What is the primary purpose of curing meat?
- To improve tenderness
 - To enhance flavour
 - To reduce microbial growth
 - To increase moisture content
- Q.6 Canned meat is primarily preserved by:
- High pressure
 - Vacuum sealing
 - Sterilization
 - Refrigeration
- Q.7 Which of the following is not a common type of canned meat?
- Canned chicken
 - Canned beef
 - Canned lamb
 - Canned tofu
- Q.8 What is the primary factor affecting the tenderness of poultry meat?
- Cooking method
 - Slaughter age
 - Feed composition
 - Genetics
- Q.9 What is the primary purpose of washing poultry during processing?
- To remove feathers
 - To improve flavour
 - To reduce microbial contamination
 - To improve flavour
- Q.10 Sausage products are typically classified based on:
- Size
 - Shape
 - Ingredients
 - All of the above

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (10x1=10)

- Q.11 Freezing is a common methods for preserving whole eggs. True/False

- Q.12 The primary cause of egg spoilage is high humidity. True/False
- Q.13 The nutritive value of eggs can vary depending on the diet of the hen. True/False
- Q.14 Salmon is a freshwater fish. True/False
- Q.15 The eggshell is primarily composed of calcium carbonate. True/False
- Q.16 The presence of clear and bright eyes is an indicator of freshness in fish. True/False
- Q.17 Hot smoking is a method used to partially cook fish while preserving its moisture and flavour. True/False
- Q.18 Pickling is a preservation method that involves soaking fish in vinegar or brine. True/False
- Q.19 Eggs are rich in omerga-3 fatty acids. True/False
- Q.20 Egg pickling is a common method for preserving eggs. True/False

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 What is the purpose of salting fish before preservation?
- Q.22 Describe the process of dehydration in fish preservation.
- Q.23 Explain how the nutrient content of eggs varies between the yolk and the white.
- Q.24 Describe the basic construction features of an abattoir.
- Q.25 What are meat by products, and how are they utilized in various industries?
- Q.26 What are the key components of the Indian meat, fish, and poultry industry?
