

Q.5 The electrolyte most important for neuromuscular excitability is

- a) Sodium b) Potassium
- c) Chloride d) Calcium

Q.6 Excessive uric acid in the blood is termed:

- a) Hyperkalemia b) Hypermagnesemia
- c) Hyperuricemia d) Hyperproteinemia

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (6x1=6)

Q.7 The cycle responsible for the formation of urea is called the _____ cycle.

Q.8 Normal blood urea level in adults is _____ mg/dl.

Q.9 The Jaffe's method is commonly used for estimation of _____.

Q.10 The major plasma protein responsible for transport of hormones is _____.

Q.11 The normal serum sodium level ranges from _____ to _____ mmol/l.

Q.12 Internal quality assurance ensures day-to-day _____ in laboratory results.

SECTION-C

Note: Short answer type questions. Attempt any eight questions out of ten questions. (8x4=32)

Q.13 Write the steps of urea formation in the liver.

Q.14 Write the procedure of Jaffe's method.

Q.15 Give two clinical conditions associated with increased blood urea levels.

Q.16 Explain the principle of the enzymatic urease method for urea estimation.

Q.17 List the reference values of serum creatinine for males and females.

Q.18 What is the principle of the Biuret test for serum proteins?

Q.19 State two clinical conditions in which serum protein level decrease.

Q.20 Write the normal reference value of potassium and mention one clinical condition when it increases.

Q.21 State the clinical importance of uric acid estimation.

Q.22 Write a short note on quality assurance in Biochemistry.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x8=16)

Q.23 Describes in detail the formation, estimation methods, reference values and clinical importance of urea.
