

Q.17 What are fire alarm pull stations, and how should they be used during a fire?

Q.18 Discuss the roles of medical services during an emergency in a workshop or industrial setting.

SECTION-D

Note: Long answer type questions. Attempt any one questions out of two questions. (1x10=10)

Q.19 Assemble a panel board using push buttons, selector switches, and toggle switches for a mock control circuit.

Q.20 a) Explain the importance of emergency exits and describe the standard guidelines for their placement.

b) Draw a simple sketch of a floor plan showing emergency exits, evacuation routes, and assembly points

No. of Printed Pages : 4
Roll No.

188563

Level 5, 2nd Sem / DVOC (Medical Image Tech.)

Subject : Soldering & De-Soldering Components & Emergency actions

Time : 2 Hrs.

M.M. : 50

SECTION-A

Note: Multiple Choice questions. All questions are compulsory. (5x1=5)

Q.1 Select the component, which is not an example of passive SMD component.

- a) Thick film resistor b) Diode
- c) Tantalum capacitor d) Ceramic capacitor

Q.2 How are SMD components in bulk mounted on PCB?

- a) Using wave soldering machine
- b) Using hot air blower
- c) Using soldering iron
- d) Using soldering pot

Q.3 Primary evacuation routes are:

- a) Routes taken to avoid CCTV cameras
- b) Random ways to escape.
- c) Only for use by managers
- d) The main planned path to exit during an emergency

- Q.4 Which of the following is an important part of reporting an emergency?
- a) Giving exact details and location of the incident
 - b) Panicking loudly
 - c) Waiting till lunch break
 - d) Leaving the premises silently
- Q.5 An emergency exit should be:
- a) Locked at all times
 - b) Used only by VIPS
 - c) Clearly marked and always accessible
 - d) Hidden to avoid misuse

SECTION-B

Note: Objective type questions. All questions are compulsory. (5x1=5)

- Q.6 A_____ refers to a type of electronic component that does not require a power source to operate, and is designed to be mounted on a printed circuit board (PCB) using surface-mount technology (SMT).
- Q.7 _____ have different contaminants like fluxes, natural and synthetic resins, salts, solder balls, fingerprints, ions, etc.
- Q.8 A_____ map displaying marked evacuation routes, fire extinguishers, and assembly points must be posted on every floor of a facility.

- Q.9 Failure to report emergencies accurately and promptly can lead to_____ in response and greater damage or injury
- Q.10 Manual fire alarm pull stations are typically located near each_____ exit and within_____ feet of the exit access to enable quick notification of fire incidents.

SECTION-C

Note: Short answer type questions. Attempt any six questions out of Eight questions. (6x5=30)

- Q.11 Explain Dual Inline Package.
- Q.12 Describe the steps to identify 2,3, and 4 terminal SMD components on a PCB.
- Q.13 List the settings required on an SMD soldering station to solder Ics of different packages.
- Q.14 Write the procedure to de-solder SMD Ics from a given PCB safely.
- Q.15 List the minimum elements that should be included in an emergency action plan.
- Q.16 Differentiate between primary and secondary evacuation routes with examples.
