

- Q.29 What are the features of HVDC Transmission Line.
- Q.30 Discuss the new trends in wireless transmission of electrical Power.
- Q.31 What is the requirement of an ideal Distribution System.
- Q.32 What are the factors to be considered in design of Feeders and Distributors.
- Q.33 Define Sag. What is the significance of Sag.
- Q.34 Explain the types of Line Insulators.
- Q.35 Discuss the Construction of Underground Cables.

SECTION-D

Note: Long answer type questions. Attempt any two questions out of three questions. (2x10=20)

- Q.36 Explain all the components used in 33KV/11KV sub-station with its layout.
- Q.37 Compare EHVAC and HVDC Transmission Systems in detail.
- Q.38 Explain the types of different distribution schemes in details.

No. of Printed Pages : 4

202433

Roll No.

3rd Semester/ Mechtronics

Subject: Electric Power Transmission & Distribution

Time : 3 Hrs.

M.M. : 100

SECTION-A

Note: Multiple choice questions. All questions are compulsory (10x1=10)

- Q.1 The effect of corona is
 a) Increased energy loss b) Increased reactance
 c) Increased inductance d) All of these
- Q.2 The main criterion for selection of the size of a distributor for radial distribution system is
 a) Voltage drop b) Corona Loss
 c) Temperature rise d) Capital Cost
- Q.3 The power factor of an inductive circuit is called as
 a) Leading power factor b) Lagging Power Factor
 c) Unity Power Factor d) None of these
- Q.4 The transmission lines which feed different sub-stations represent
 a) Primary transmission
 b) Secondary transmission
 c) Primary distribution
 d) Secondary distribution

- Q.5 Primary distribution lines are known as
 a) Reactors b) feeders
 c) Sub-transmission lines d) None of these
- Q.6 The volume of copper required for an A.C. transmission line is inversely proportional to
 a) Current b) Voltage
 c) Power factor d) Both (B) & (C)
- Q.7 Voltage regulation in the power system is _____.
 a) Dip in voltage at sending end
 b) Rise in voltage at sending end
 c) Rise in voltage at receiving end
 d) Dip in voltage at receiving end
- Q.8 What is the effect of rise in temperature on sag when Ice and wind effect are eliminated?
 a) Sag decreases b) Sag increases
 c) Sag remains constant d) Sag becomes zero
- Q.9 _____ conductors are the latest trend of the extra high voltage lines.
 a) Bundled b) Parallel
 c) ACSR d) Bundled or ACSR
- Q.10 While designing the distribution sub stations by the designer, it is required to use the _____ for the discrete power tapping.
 a) Distributor
 b) Power transformer
 c) Distribution transformer
 d) Feeder

SECTION-B

Note: Objective/ Completion type questions. All questions are compulsory. (10x1=10)

- Q.11 What is Switchgear?
 Q.12 Write the full-form of GIS.
 Q.13 Define Tariff.
 Q.14 What is Power Factor?
 Q.15 What is a distributor?
 Q.16 What do you mean by Skin effect?
 Q.17 What is Proximity effect?
 Q.18 Write the full-form of A.C.S.R.
 Q.19 If the sag in the overhead line increases, tension in the line _____.
 Q.20 Corona Loss can be minimized, if the size of the conductor is _____.

SECTION-C

Note: Short answer type questions. Attempt any twelve questions out of fifteen questions. (12x5=60)

- Q.21 Draw the Single Line diagram of Transmission and Distribution systems.
 Q.22 Classify the Transmission Line.
 Q.23 Explain the methods of construction of electric supply Transmission systems.
 Q.24 Explain the concept of Line parameters.
 Q.25 Discuss the performance of Short Transmission line.,
 Q.26 Explain the Transposition of Lines.
 Q.27 What is necessity of EHVAC Transmission Lines.
 Q.28 Discuss the Corona effect in detail.
